**Untangled Web** David T Graham, Jane McNeil, Lloyd Pettiford, 2014-09-15 The internet and world wide web are revolutionizing many aspects of our lives, and have become an accepted part of socioeconomic experience in developed countries. For entertainment, shopping, banking, establishing friendships, seeking information, and so on, the web is the first port of call for an increasing number of people. A few in education have been quick to see the potential of the web as a platform for delivering a variety of teaching and learning materials. Many more, however, would like to make use of the web, but lack either the time or the skills, or both. Untangled Web provides a guide for those wishing to develop their own teaching and learning resources on the web, whether for local, open or distance learning. By using this book, potential web educators can acquire some of these basic skills and save time by drawing on the experiences of the authors and avoiding the pitfalls and problems that they have encountered. The authors have gained considerable expertise in devising, designing, constructing, testing, adapting and evaluating their own web-based instruction packages which have been developed over a number of years and involve a variety of subject areas. Untangled web is therefore very much focused on practical

experience, and while it is primarily aimed at teachers in further and higher education, schoolteachers interested in using the web as a teaching and learning medium will find it useful. *Untangled Web* has been written by an experienced team from the Department of International Studies at the Nottingham Trent University. David Graham teaches geography and information technology; Jane McNeil is Faculty webmaster and teaches medieval history and information technology; Lloyd Pettiford teaches international relations. *Innovative guide to using the web in teaching and learning*, providing practical advice for lecturers and teachers on using the web as more than just a support tool

**Signal, Audio and Image Processing** Dr. Hidaia Mahmood Alassouli,2020-04-02 This project shows some selected signal techniques, including image and audio processing, using the Matlab digital signal processing and image processing toolboxes. The project is divided to 3 parts. Part I includes design and implementation of different types of filters for filtering signal that has different sinusoidal frequency components or noise. The comparison was made between FIR low pass filter, butterworth filter, Chebycheve Type I low pass filter and Chebycheve Type II low pass filter. Then different types of IIR Butterworth filters were designed and implemented to filter a signal that has many harmonics components, including low pass filter, high pass filter, stop band filter and band pass filter. Part II examined audio filtering in the sense of specific frequency suppression and extraction. There are many different types of filters available for the construction of filters. We will specifically use the Butterworth filter. An audio signal was read and different types of filters, including low pass filter, high pass filter, stop band filter and band pass filter, were designed and implemented in order to filter the audio signal from some frequency bands. Then the discrete cosine transform compression examined on the audio signal at different compression rates: 50%, 75% , 87.5% Part III deals with image processing; the project shows examples in smoothing, sharpening, and edge detection. Other useful operations on the image were tested, including image cropping, image resizing, image, histogram equalization and altering image brightness

**FUNDAMENTALS OF COMPUTERS** V. RAJARAMAN, NEEHARIKA ADABALA, 2014-12-15 The sixth edition of the highly acclaimed "Fundamentals of Computers" lucidly presents how a computer system functions. Both hardware and software aspects of computers are covered. The book begins with how numeric and character data are represented in a computer, how various input and output units function, how different types of memory units are organized, and how data is processed by the processor. The interconnection and communication between the I/O units, the memory, and the processor is explained clearly and concisely. Software concepts such as programming languages, operating systems, and communication protocols are discussed. With growing use of wireless to access computer networks, cellular wireless communication systems, WiFi (Wireless high fidelity), and WiMAX have become important. Thus it has now become part of "fundamental knowledge" of computers and has been included. Besides this, use of computers in multimedia processing has become commonplace and hence is discussed. With the increase in speed of networks and consequently the Internet, new computing environments such as peer to peer, grid, and cloud computing have emerged and will change the future of computing. Hence a new chapter on this topic has been included in this edition. This book is an ideal text for undergraduate and postgraduate students of Computer Applications (BCA and MCA), undergraduate students of engineering and computer science who study fundamentals of computers as a core course, and students of management who should all know the basics of computer hardware and software. It is ideally suited for working professionals who want to update their knowledge of fundamentals of computers.
