**An Introduction to the Event-Related Potential Technique, second edition** Steven J. Luck, 2014-05-30 An essential guide to designing, conducting, and analyzing event-related potential (ERP) experiments, completely updated for this edition. The event-related potential (ERP) technique, in which neural responses to specific events are extracted from the EEG, provides a powerful noninvasive tool for exploring the human brain. This volume describes practical methods for ERP research along with the underlying theoretical rationale. It offers researchers and students an essential guide to designing, conducting, and analyzing ERP experiments. This second edition has been completely updated, with additional material, new chapters, and more accessible explanations. Freely available supplementary material, including several online-only chapters, offer expanded or advanced treatment of selected topics. The first half of the book presents essential background information, describing the origins of ERPs, the nature of ERP components, and the design of ERP experiments. The second half of the book offers a detailed treatment of the main steps involved in conducting ERP experiments, covering such topics as recording the EEG, filtering the EEG and ERP waveforms, and quantifying amplitudes and latencies. Throughout, the emphasis is on rigorous experimental design and relatively simple analyses. New material in the second edition includes entire chapters devoted to components, artifacts, measuring amplitudes and latencies, and statistical analysis; updated coverage of recording technologies; concrete examples of experimental design; and many more figures. Online chapters cover such topics as overlap, localization, writing and reviewing ERP papers, and setting up and running an ERP lab.

**The Dinosaur Feather** S.J. Gazan, 2013-11-05 Selected by NPR's Maureen Corrigan and The Wall Street Journal's Tom Nolan as one of the best mysteries of the year, Gazan's *The Dinosaur Feather*--which the Financial Times called outrageously entertaining--is a classic of modern Scandinavian noir. With keenly observed and deeply flawed characters, this scintillating thriller revolves around the controversial and fascinating connections between dinosaur and avian evolution. Biology postgraduate, PhD hopeful, and single mom Anna Bella Nor is just two weeks away from defending her thesis on the saurian origin of birds when her academic supervisor, the highly respected yet widely despised Dr. Lars Helland, is found dead in his office chair at the University of Copenhagen. The police discover a copy of Anna's thesis in the dead man's bloody lap. When the autopsy suggests that Helland was murdered in a fiendishly ingenious way, brilliant but tormented young Police

Superintendent Soren Marhaug is called to investigate. As he begins the daunting task of unraveling the knotted skeins of interpersonal and intellectual intrigue among the scientists at the university, his own troubled past begins to complicate the case. Everyone involved with the investigation--from Anna Bella Nor to Helland's numerous academic rivals to Marhaug's own ex-wife, who is pregnant with her current husband's child--has something to hide, muddying the investigation and presenting the detective with the greatest professional and personal challenge of his life.

Additional studies deal with a Monte Carlo method for generating models of porosity and permeability, with facies characterization using wireline logs or with petrographic applications of image analysis. As further reading this volume is of significant interest for researchers in oil and gas industries but also for scientists at universities.

Sonny S. J. Peddie,2022-03-29 “Couldn’t put it down.” —Nicholas Pileggi, author of Wiseguy (Goodfellas) and Casino The extraordinary life and times of a legendary crime boss who refused to squeal—but who finally agreed to talk to an award-winning New York Newsday reporter shortly before his death at age 103 . . . John “Sonny” Franzese reportedly committed his first murder at the age of fourteen. As a “made man” for the Colombo crime family, he operated out of his Long Island home specializing in racketeering, fraud, loansharking, and other illicit deeds he would deny to his dying day. His career in organized crime spanned over eight decades—and he was sentenced to fifty years in prison for robbery charges. But even behind bars, Sonny Franzese never stopped doing business . . . This is the true story of an old-school mafioso as it’s never been told before. Newsday reporter S. J. Peddie interviewed Franzese in prison—and uncovered a lifetime of shocking secrets from the legend himself: \* Why FBI Director J. Edgar Hoover had a very personal interest in Sonny. \* How Sonny managed to juggle numerous affairs with women, including a famous model. \* How Sonny spent a third of his life in prison—and still managed to earn untold millions for the mob. \* How Sonny accidentally revealed some of his worst crimes—to a “friend” wearing a wire. Through it all, Franzese refused to break the Mafia’s code of silence. Authorities believe he may have murdered, or ordered the murders of, forty to fifty people. Yet he earned a grudging respect from law enforcement and an absolute reverence from his fellow gangsters. Eventually he managed to outlive them all—until his death in 2020 of natural causes, a rare event in the Mafia. Thanks to a series of exclusive firsthand interviews, the astonishing life story of John “Sonny” Franzese can be told in all its bold, brutal, and blood-spattered glory. This is a must-read for anyone fascinated with Mafia history—and a rare look inside a criminal mind that has become the stuff of legend.

Surface & Coatings Technology J. P. G. Farr, B. D. Sartwell, 2016-06-03 Surface & Coatings Technology represents the start of a new era for the journal, not only with the change in title to Surface and Coatings Technology, but also with the significant change in the journal's scope, which is intended to place it in the forefront of the coatings and surface modification field. This presents volume contains 100 contributions. It is intended to become the principal forum for the interchange of information on the science, technology, and application of coatings and modified surfaces as they relate to modification of the mechanical, chemical, or optical properties of materials. The aim of the journal is to publish research papers and invited review articles on various subjects. A new feature will be the addition of a short section at the beginning of each issue in which each author states which technical problems are being addressed in his article. These will be catalogued at the end of each year in order that a scientist or engineer who has a particular problem related to coatings can determine whether there were any papers that addressed the problem. It is hoped that Surface and Coatings Technology will have a significant impact in one of the most exciting areas of materials research being investigated today.

*Numerical Optimization* Jorge Nocedal, Stephen Wright, 2006-12-11 Optimization is an important tool used in decision science and for the analysis of physical systems used in engineering. One can trace its roots to the Calculus of Variations and the work of Euler and Lagrange. This natural and reasonable approach to mathematical programming covers numerical methods for finite-dimensional optimization problems. It begins with very simple ideas progressing through more complicated concepts, concentrating on methods for both unconstrained and constrained optimization.
