Black Diamond Queens Maureen Mahon, 2020-10-09 African American women have played a pivotal part in rock and roll—from laying its foundations and singing chart-topping hits to influencing some of the genre's most iconic acts. Despite this, black women's importance to the music's history has been diminished by narratives of rock as a mostly white male enterprise. In *Black Diamond Queens*, Maureen Mahon draws on recordings, press coverage, archival materials, and interviews to document the history of African American women in rock and roll between the 1950s and the 1980s. Mahon details the musical contributions and cultural impact of Big Mama Thornton, LaVern Baker, Betty Davis, Tina Turner, Merry Clayton, Labelle, the Shirelles, and others, demonstrating how dominant views of gender, race, sexuality, and genre affected their careers. By uncovering this hidden history of black women in rock and roll, Mahon reveals a powerful sonic legacy that continues to reverberate into the twenty-first century.

Boring Postcards Martin Parr, 2004-03-01 Martin Parr is a key figure in the world of photography and contemporary art. Some accuse him of cruelty, but many more appreciate the wit and irony with which he tackles such subjects as bad taste, food, the tourist, shopping and the foibles of the British. Parr has been collecting postcards for 20 years, and here is the cream of his collection - his boring postcards. With no introduction or commentary of any kind, Parr's boring postcards are reproduced straight. They are exactly what they say they are, namely boring picture postcards showing boring photographs of boring places, presumably for boring people to buy to send to their boring friends. All of them are shot in Britain, taking us on a boring tour of its motorways, ring roads, traffic interchanges, bus stations, pedestrian precincts, factories, housing estates, airports, caravan sites, convalescent homes and shopping centres. Some attempt to idealize their subjects, only to fail dismally. Others lack any apparent purpose or interest, but the resultant collection of photographic images is wholly compelling. *Boring Postcards* is multi-layered: a commentary on British architecture, social life and identity, a record of a folk photography which is today being appropriated by the most fashionable photographers (including Parr), an exercise in sublime minimalism and, above all, a richly comic photographic entertainment.

Design, Modeling and Control of Nanopositioning Systems Andrew J. Fleming, Kam K. Leang, 2014-05-15 Covering the

complete design cycle of nanopositioning systems, this is the first comprehensive text on the topic. The book first introduces concepts associated with nanopositioning stages and outlines their application in such tasks as scanning probe microscopy, nanofabrication, data storage, cell surgery and precision optics. Piezoelectric transducers, employed ubiquitously in nanopositioning applications are then discussed in detail including practical considerations and constraints on transducer response. The reader is then given an overview of the types of nanopositioner before the text turns to the in-depth coverage of mechanical design including flexures, materials, manufacturing techniques, and electronics. This process is illustrated by the example of a high-speed serial-kinematic nanopositioner. Position sensors are then catalogued and described and the text then focuses on control. Several forms of control are treated: shunt control, feedback control, force feedback control and feedforward control (including an appreciation of iterative learning control). Performance issues are given importance as are problems limiting that performance such as hysteresis and noise which arise in the treatment of control and are then given chapter-length attention in their own right. The reader also learns about cost functions and other issues involved in command shaping, charge drives and electrical considerations. All concepts are demonstrated experimentally including by direct application to atomic force microscope imaging. Design, Modeling and Control of Nanopositioning Systems will be of interest to researchers in mechatronics generally and in control applied to atomic force microscopy and other nanopositioning applications. Microscope developers and mechanical designers of nanopositioning devices will find the text essential reading.

7 Dimensions of Singing Andrew Phan, 2018-11-08 If you can speak, you can sing. In this must-read book for anyone looking to learn more about their voice, Richard Fink IV shows how singers, from beginners to seasoned professionals, can

reach their full potential through a scientific lens. Drawing from his own experiences of overcoming obstacles and learning how to sing, Richard, a now celebrated singing teacher and Guinness World Record holder as a vocalist, breaks down the only vocal methodology in history to receive a US Patent, the Throga® Technique. In the 7 Dimensions of Singing, readers are taken on a journey through vocal anatomy, accelerated skill training, self-diagnostics and customizable solutions. Readers can also explore chapter exercises first-hand by jumping online to download audio examples and practice tracks. Throughout the book, Richard brilliantly weaves the coordination of complex physiological structures into simple concepts, by comparing them to everyday activities, along with dynamic examples of real-world applications from Throga students, from performing on the streets of Sydney, Australia, to nervously waiting backstage at Radio City Music Hall in New York and defying the odds with a life-threatening lung disease. The 7 Dimensions of Singing (The Throga® Technique) is essential for singers of all ages, styles, and skill levels, helping to connect the mind (the singer) and the body (the instrument) through awareness and mindful-practice.

The Founding of Thomas Jefferson's University John A. Ragosta, Peter S. Onuf, Andrew J. O'Shaughnessy, 2019-09-10 Established in 1819 by Thomas Jefferson, the University of Virginia was known as The University throughout the South for most of the nineteenth century, and today it stands as one of the premier universities in the world. This volume provides an in-depth look at the founding of the University and, in the process, develops new and important insights into Jefferson's contributions as well as into the impact of the University on the history of higher education. The contributors depict the students who were entering higher education in the early republic--their aspirations, their juvenile and often violent confrontations with authority, and their relationships with enslaved workers at the University. Contributors then turn to the building of the University, including its unique architectural plan as an Academical Village and the often-hidden role of African Americans in its construction and day-to-day life. The next set of essays explore various aspects of Jefferson's intellectual vision for the University, including his innovative scheme for medical education, his dogmatic view of the necessity of a republican legal education, and the detailed plans for the library by Jefferson, one of America's preeminent bibliophiles. The book concludes by considering the changing nature of education in the early nineteenth century, in particular the new focus on research and discovery, in which Jefferson, again, played an important role. Providing a fascinating and important look at the development of one of America's oldest and most preeminent educational institutions, this book provides yet another perspective from which to appreciate the extraordinary contributions of Jefferson in the development of the new nation.

Devoted to Death R. Andrew Chesnut, 2018 R. Andrew Chesnut offers a fascinating portrayal of Santa Muerte, a skeleton saint whose cult has attracted millions of devotees over the past decade. Although condemned by mainstream churches, this folk saint's supernatural powers appeal to millions of Latin Americans and immigrants in the U.S. Devotees believe the Bony Lady (as she is affectionately called) to be the fastest and most effective miracle worker, and as such, her statuettes and paraphernalia now outsell those of the Virgin of Guadalupe and Saint Jude, two other giants of Mexican religiosity. In particular, Chesnut shows Santa Muerte has become the patron saint of drug traffickers, playing an important role as protector of peddlers of crystal meth and marijuana; DEA agents and Mexican police often find her altars in the safe houses of drug smugglers. Yet Saint Death plays other important roles: she is a supernatural healer, love doctor, money-maker, lawyer, and angel of death. She has become without doubt one of the most popular and powerful saints on both the Mexican and American religious landscapes.

An Unlikely Gift Lauren Boswell Blair, 2013-12 From ancient times to the present there are those who have treated children with disabilities as being cursed by God. In this book, Lauren Blair not only challenges such benighted behavior but makes the case as to how such children can be viewed as gifts from God who can bless the rest of us. --Tony Campolo, Author/Speaker/Professor Emeritus of Sociology at Eastern University; Founder of the Evangelical Association for the Promotion of Education Lauren Blair ... tells a story that will warm your heart--but not until it breaks it, deepens it, expands it,

and fills it with love for beautiful African children you've not yet met. --Brian D. McLaren, Author/Speaker/Activist (brianmclaren.net)

The Motherlode Clover Hope, 2021-02-02 An illustrated highlight reel of more than 100 women in rap who have helped shape the genre and eschewed gender norms in the process The Motherlode highlights more than 100 women who have shaped the power, scope, and reach of rap music, including pioneers like Roxanne Shanté, game changers like Lauryn Hill and Missy Elliott, and current reigning queens like Nicki Minaj, Cardi B, and Lizzo—as well as everyone who came before, after, and in between. Some of these women were respected but not widely celebrated. Some are impossible not to know. Some of these women have stood on their own; others were forced into templates, compelled to stand beside men in big rap crews. Some have been trapped in a strange critical space between respected MC and object. They are characters, caricatures, lyricists, at times both feminine and explicit. This book profiles each of these women, their musical and career breakthroughs, and the ways in which they each helped change the culture of rap.

Muse Sick Ian Brennan, 2021-10-19 Grammy-winning music producer, Ian Brennan's seventh book, *Muse-Sick*: a music manifesto in fifty-nine notes, acts as a primer on how mass production and commercialization have corrupted the arts. Broken down into a series of core points and actions plans, *Muse-Sick* is a concise and affordable pocket primer follow-up to Brennan's two previous music missives, *How Music Dies (or Lives): Field Recording and the Battle for Democracy in the arts* and *Silenced by Sound: The Music Meritocracy Myth*. Popular culture has woven itself into the social fabric of our lives, penetrating people's homes and haunting their psyche through images and earworm hooks. Justice, at most levels, is something that the average citizen might have little influence upon leaving us feeling helpless and complacent. But pop music is a neglected arena where some change can concretely occur—by exercising active and thoughtful choices to reject the low-hanging, omnipresent commercialized and pre-packaged fruit, we begin to re-balance the world, one engaged listener at a time. In fifty-nine concise and clear points, Brennan reveals how corporate media has constricted local culture

and individual creativity, leading to a lack of diversity within “diversity.” Muse-Sick’s narrative portions are driven and made corporeal via the author’s ongoing field-recording chronicles with widely disparate groups, such as the Sheltered Workshop Singers. Marilena Umuhoza Delli’s striking photographs accompany and bring to life each tale. As John Waters says: “I didn’t think it was possible to write a shocking book about music anymore. But Brennan has.”

Astonished Beverly Donofrio, 2013-03-07 A bestselling memoirist bravely tells the story of the night evil paid her a visit—and how prayer chased evil away Beverly Donofrio had already lived two lives, first as a scrappy young mother on the streets of the East Village and later as the bestselling author of *Riding in Cars with Boys*. By the time she reached her fifties, she thought she had seen it all. Now, even though she was living in a vibrant, picturesque Mexican town, where she practiced yoga, drank margaritas in her backyard, and took salsa lessons, she felt lost and was searching for monasteries to visit. The religious practice that had nourished her for several years had faded. She missed God. Then one night she woke to find a rapist holding a knife to her throat. So begins the memoir that charts Donofrio’s journey—a long and twisting road through denial, mourning, anger, vulnerability, and retreat at five very different monasteries. Told through Donofrio’s brutally honest, often ribald, emotionally unsparing voice, *Astonished* is a tender and hopeful narrative of healing and learning to love life again.

Self-science Karen Stone-McCown, Joshua M. Freedman, Anabel L. Jensen, Marsha C. Rideout, 1998 Self-Science is a curriculum and a process for teaching social and emotional skills. It is a flexible framework where students do activities, or experiments, that lead to discussion and learning. The students' own experiences, concerns, and questions drive the content, so the process works with people from all kinds of backgrounds, all ages, and all levels. Self-Science fuses cognitive and affective learning: students build feeling and thinking skills at the same time. Rather than telling children what not to do, Self-Science provides multiple options of what to do. It helps children become more aware of themselves and make more conscious decisions about the ways they think, feel, and act independently and interdependently. Nationally and internationally, parents and teachers are increasingly concerned about school culture and emotional intelligence competencies. Issues of exclusion, violence, depression, and under achievement are all addressed within this preventative, comprehensive program. Self-Science -- so named because emotional intelligence grows from the study of ourselves and our relationships -- is one of the few comprehensive, developmental, and research-based curricula for creating a school-wide culture of emotional intelligence. The Self-Science program creates a fundamental shift in the structure of the school toward collaboration, inclusion, and humanism. Part of the power of Self-Science is its flexibility. Once a facilitator understands how a lesson flows, she or he can easily adapt any current topics, other exercises, and even academic subject matter into the lessons. In addition, Self-Science can be taught as a stand-alone class or folded into existing programs such as class meetings, advisory, life-skills, or community service.

Interference-Corrected Explicitly-Correlated Second-Order Perturbation Theory. Konstantinos D.

Vogiatzis,2013-03 Konstantinos D. Vogiatzis presents a new approximate coupled-cluster scheme which estimates the coupled-cluster singles-and-doubles with perturbative triples (CCSD(T)) energy at the ba-sis set limit. The CCSD(T) method is considered nowadays as the 'gold standard' of modern electronic structure theory. The major limitations of the method are the large computational time and computer resources needed for obtaining high accuracy. In the new method presented by Vogiatzis, this drawback is eliminated by adding terms obtained from the interference-corrected explicitly-correlated second-order perturbation theory. The new CCSD(T)-INT-F12 method reaches the expected high accuracy of CCSD(T) in significantly shorter time. The theoretical background of the CCSD(T)-INT-F12 method is discussed and its im-plementation is analyzed in terms of computational efficiency and accuracy. The perfor-mance of the method has been tested in two different fields. The first covers the calculation of atomization energies and reaction barrier heights, and the importance of the interference corrections is highlighted. The second part is related to noncovalent interactions. The high accuracy of the CCSD(T)-INT-F12 method for the calculation of interaction energies is shown from the excellent results obtained for the S22 test set. Based on this, the method is used for the theoretical description of two different applications related to noncovalent interactions: The non-classical amino NH... π hydrogen bond and the hydrogen adsorption in metal-organic frameworks (MOFs) with open metal sites. For the latter, the surprising strength of the interaction indicates a possible application of such porous materials that exhibit open metal sites as hydrogen carriers.
