Climate Change, Torn between Myth and Fact Constantin Cranganu, 2021-07-16 This book is both a plea and an invitation to consider climate change from a multi-faceted perspective, taking into account (geo)physical, social, cultural, psychological, religious, mythological, economic, and judicial viewpoints, among others. As such, it will serve as a useful and necessary guide towards a better understanding of our own mental structures and systems of preferences, ideologies, or beliefs.

*Water and Energy* Gustaf Olsson, 2015-06-14 Rapid and important developments in the area of energy - water nexus over the last two to three years have been significant. This new edition of *Water and Energy: Threats and Opportunities* is timely and continues to highlight the inextricable link between water and energy, providing an up-to-date overview of the subject with helpful detailed summaries of the technical literature. *Water and Energy* has been up-dated throughout and major changes are: new chapters on global warming and fossil fuels, including shale gas and fracking; the consequences of the Deepwater Horizon accident in the Mexican Gulf and the Niger Delta oil spills; new developments in hydropower; and continued competition between food, water and energy. *Water and Energy Threats and Opportunities, 2e* creates an awareness of the important couplings between water and energy. It shows how energy is used in all the various water cycle operations and demonstrates how water is used and misused in all kinds of energy production and generation. Population increase, climate change and an increasing competition between food and fuel production create enormous pressures on both water and energy availability. Since there is no replacement for water, water security looks more crucial than energy security. This is true not only in developing countries but also in the most advanced countries. For example, the western parts of the USA suffer from water scarcity that provides a real security threat. Part One of the book describes the water-energy nexus, the conflicts and competitions and the couplings between water security, energy security, and food security.

Part Two captures how climate change, population increase and the growing food demand will have major impact on water availability in many countries in the world. Part Three describes water for energy and how energy production and conversion depend on water availability. As a consequence, all planning has to take both water and energy into consideration. The environmental (including water) consequences of oil and coal exploration and refining are huge, in North America as well as in the rest of the world. Furthermore, oil leak accidents have hit America, Africa, Europe as well as Asia. The consequences of hydropower are discussed and the competition between hydropower generation, flood control and water storage is illustrated. The importance of water for cooling thermal power plants is described, as this was so tragically demonstrated at the Fukushima nuclear plants in 2011. Climate change will further emphasize the strong coupling between water availability and the operation of power plants. Part Four analyses energy for water - how water production and treatment depend on energy. The book shows that a lot can be done to improve equipment, develop processes and apply advanced monitoring and control to save energy for water operations. Significant amounts of energy can be saved by better pumping, the reduction of leakages, controlled aeration in biological wastewater treatment, more efficient biogas production, and by improved desalination processes. There are 3 PowerPoint presentations available for Water and Energy - threats and opportunities, 2e. About the author Gustaf Olsson, Professor Em. in Industrial Automation, Lund University, Sweden Since 2006, Gustaf has been Professor Emeritus at Lund University, Sweden. Gustaf has devoted his research to control and automation in water systems, electrical power systems and process industries. From 2006 to 2008 he was part time professor in electrical power systems at Chalmers University of Technology, Sweden. He is guest professor at the Technical University of Malaysia (UTM) and at the Tsinghua University in Beijing, China and he is an honorary faculty member of the Exeter University in UK. Between 2005 and 2010 he was the editor-in-chief of the journals Water Science and Technology and Water Science and Technology/Water Supply, (IWA Publishing). From 2007 to 2010, he was a member of the IWA Board of Directors and in 2010 he received the IWA Publication Award. In 2012 he was the awardee of an Honorary Doctor degree at UTM and an Honorary Membership of IWA. Gustaf has guided 23 PhDs and a few hundred MSc students through their exams and has received the Lund University pedagogical award for distinguished achievements in the education. The Lund University engineering students elected him as the teacher of the year He has spent extended periods as a guest professor and visiting researcher at universities and companies in the USA, Australia and Japan and has been invited as a guest lecturer in 19 countries outside Sweden. He has authored nine books published in English, Russian, German and Chinese and and contributed with chapters in another 19 books as well as more than 170 scientific publications.

*Verifying Greenhouse Gas Emissions* National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Methods for Estimating Greenhouse Gas Emissions, 2010-07-28 The world's nations are moving toward agreements that will bind us together in an effort to limit future greenhouse gas emissions. With such

agreements will come the need for all nations to make accurate estimates of greenhouse gas emissions and to monitor changes over time. In this context, the present book focuses on the greenhouse gases that result from human activities, have long lifetimes in the atmosphere and thus will change global climate for decades to millennia or more, and are currently included in international agreements. The book devotes considerably more space to CO<sub>2</sub> than to the other gases because CO<sub>2</sub> is the largest single contributor to global climate change and is thus the focus of many mitigation efforts. Only data in the public domain were considered because public access and transparency are necessary to build trust in a climate treaty. The book concludes that each country could estimate fossil-fuel CO<sub>2</sub> emissions accurately enough to support monitoring of a climate treaty. However, current methods are not sufficiently accurate to check these self-reported estimates against independent data or to estimate other greenhouse gas emissions. Strategic investments would, within 5 years, improve reporting of emissions by countries and yield a useful capability for independent verification of greenhouse gas emissions reported by countries.

**2016 Global Food Policy Report** International Food Policy Research Institute (IFPRI), 2016-03-31 The Global Food Policy Report is IFPRI's flagship publication. This year's annual report examines major food policy issues, global and regional developments, and commitments made in 2015, and presents data on key food policy indicators. The report also proposes key policy options for 2016 and beyond to achieve the Sustainable Development Goals. In 2015, the global community made major commitments on sustainable development and climate change. The global food system lies at the heart of these commitments—and we will only be able to meet the new goals if we work to transform our food system to be more inclusive, climate-smart, sustainable, efficient, nutrition- and health-driven, and business-friendly.

The Land Grabbers Fred Pearce, 2012-05-29 How Wall Street, Chinese billionaires, oil sheiks, and agribusiness are buying up huge tracts of land in a hungry, crowded world. An unprecedented land grab is taking place around the world. Fearing future food shortages or eager to profit from them, the world's wealthiest and most acquisitive countries, corporations, and individuals have been buying and leasing vast tracts of land around the world. The scale is astounding: parcels the size of small countries are being gobbled up across the plains of Africa, the paddy fields of Southeast Asia, the jungles of South America, and the prairies of Eastern Europe. Veteran science writer Fred Pearce spent a year circling the globe to find out who was doing the buying, whose land was being taken over, and what the effect of these massive land deals seems to be. The Land Grabbers is a first-of-its-kind exposé that reveals the scale and the human costs of the land grab, one of the most profound ethical, environmental, and economic issues facing the globalized world in the twenty-first century. The corporations, speculators, and governments scooping up land cheap in the developing world claim that industrial-scale farming will help local economies. But Pearce's research reveals a far more troubling reality. While some mega-farms are ethically run, all too often poor farmers and cattle herders are evicted from ancestral lands or cut off from water sources. The

good jobs promised by foreign capitalists and home governments alike fail to materialize. Hungry nations are being forced to export their food to the wealthy, and corporate potentates run fiefdoms oblivious to the country beyond their fences. Pearce's story is populated with larger-than-life characters, from financier George Soros and industry tycoon Richard Branson, to Gulf state sheikhs, Russian oligarchs, British barons, and Burmese generals. We discover why Goldman Sachs is buying up the Chinese poultry industry, what Lord Rothschild and a legendary 1970s asset-stripper are doing in the backwoods of Brazil, and what plans a Saudi oil billionaire has for Ethiopia. Along the way, Pearce introduces us to the people who actually live on, and live off of, the supposedly "empty" land that is being grabbed, from Cambodian peasants, victimized first by the Khmer Rouge and now by crony capitalism, to African pastoralists confined to ever-smaller tracts. Over the next few decades, land grabbing may matter more, to more of the planet's people, than even climate change. It will affect who eats and who does not, who gets richer and who gets poorer, and whether agrarian societies can exist outside corporate control. It is the new battle over who owns the planet.

**The Fight for Climate After COVID-19** Alice C. Hill, 2021 The Fight for Climate after COVID-19 draws on the troubled and uneven COVID-19 experience to illustrate the critical need to ramp up resilience rapidly and effectively on a global scale. After years of working alongside public health and resilience experts crafting policy to build both pandemic and climate change preparedness, Alice C. Hill exposes parallels between the underutilized measures that governments should have taken to contain the spread of COVID-19 -- such as early action, cross-border planning, and bolstering emergency preparation -- and the steps leaders can take now to mitigate the impacts of climate change. Through practical analyses of current policy and thoughtful guidance for successful climate adaptation, The Fight for Climate after COVID-19 reveals that, just as our society has transformed itself to meet the challenge of coronavirus, so too will we need to adapt our thinking and our policies to combat the ever-increasing threat of climate change. --

**Energy, Transport, & the Environment** Oliver Inderwildi, David Anthony King, Sir David King, 2012-03-04 Sustainable mobility is a highly complex problem as it is affected by the interactions between socio-economic, environmental, technological and political issues. Energy, Transport, & the Environment: Addressing the Sustainable Mobility Paradigm brings together leading figures from business, academia and governments to address the challenges and opportunities involved in working towards sustainable mobility. Key thinkers and decision makers approach topics and debates including: · energy security and resource scarcity · greenhouse gas and pollutant emissions · urban planning, transport systems and their management · governance and finance of transformation · the threats of terrorism and climate change to our transport systems. Introduced by a preface from U.S. Secretary Steven Chu and an outline by the editors, Dr Oliver Inderwildi and Sir David King, Energy, Transport, & the Environment is divided into six sections. These sections address and explore the challenges and opportunities for energy supply, road transport, urban mobility, aviation, sea and rail, as well as finance and

economics in transport. Possible solutions, ranging from alternative fuels to advanced urban planning and policy levers, will be examined in order to deepen the understanding of currently proposed solutions within the political realities of the dominating economic areas. The result of this detailed investigation is an integrated view of sustainable transport for both people and freight, making Energy, Transport, & the Environment key reading for researchers, decision makers and policy experts across the public and private sectors.

**Forest Economics and Policy Analysis** William F. Hyde, David H. Newman, Roger A. Sedjo, 1991 This paper identifies the essential features of the forestry economics literature emphasizing what is different about forestry and what are forestry's important features for project and program analysis. The important conclusion, is that economic tools are both available and appropriate for the analysis of a wide range of forest policy problems. The report is divided into two parts. The characteristics that received special attention in the first part are the embodiment of both productive capital and final output in any standing forest inventory, and the long time periods that often distinguish forest production. A third distinguishing characteristic is the joint production nature of many forest resource services. The second part of the paper visits seven special topics that are important to forestry and economic development: (1) timber production; (2) smallholder forest management; (3) forestry research, education, and extension; (4) tenure; (5) policy spillovers from other sectors of the economy that can substantially alter forests and forestland management; (6) non-timber multiple use values; and (7) deforestation, timber famine or its counter, sustainable forest management.

**Building a Resilient Tomorrow** Alice C. Hill, Leonardo Martinez-Diaz, 2020 Even under the most optimistic scenarios, significant global climate change is now inevitable. While squarely confronting the scale of the risks we face, Building a Resilient Tomorrow presents replicable sustainability successes and clear-cut policy recommendations that can improve the climate resilience of communities in the US and beyond.

**Negative Emissions Technologies and Reliable Sequestration** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Ocean Studies Board, Board on Chemical Sciences and Technology, Board on Earth Sciences and Resources, Board on Agriculture and Natural Resources, Board on Energy and Environmental Systems, Board on Atmospheric Sciences and Climate, Committee on Developing a Research Agenda for Carbon Dioxide Removal and Reliable Sequestration, 2019-04-08 To achieve goals for climate and economic growth, negative emissions technologies (NETs) that remove and sequester carbon dioxide from the air will need to play a significant role in mitigating climate change. Unlike carbon capture and storage technologies that remove carbon dioxide emissions directly from large point sources such as coal power plants, NETs remove carbon dioxide directly from the atmosphere or enhance natural carbon sinks. Storing the carbon dioxide from NETs has the same impact on the atmosphere and climate as simultaneously preventing an equal amount of carbon dioxide from being emitted. Recent analyses found that deploying NETs may be less

expensive and less disruptive than reducing some emissions, such as a substantial portion of agricultural and land-use emissions and some transportation emissions. In 2015, the National Academies published *Climate Intervention: Carbon Dioxide Removal and Reliable Sequestration*, which described and initially assessed NETs and sequestration technologies. This report acknowledged the relative paucity of research on NETs and recommended development of a research agenda that covers all aspects of NETs from fundamental science to full-scale deployment. To address this need, *Negative Emissions Technologies and Reliable Sequestration: A Research Agenda* assesses the benefits, risks, and sustainable scale potential for NETs and sequestration. This report also defines the essential components of a research and development program, including its estimated costs and potential impact.

**The Battle of Bretton Woods** Benn Steil, 2013-02-24 Recounts the events of the Bretton Woods accords, presents portraits of the two men at the center of the drama, and reveals Harry White's admiration for Soviet economic planning and communications with intelligence officers.

**Food versus Fuel** Frank Rosillo-Calle, Francis Johnson, 2013-04-04 Food versus Fuel presents a high-level introduction to the science and economics behind a well-worn debate, that will debunk myths and provide quality facts and figures for academics and practitioners in development studies, environment studies, and agricultural studies. Compiled by an internationally renowned scientist and authority, and to include perspectives from 'pro' and 'anti' biofuels experts and activists, from the North and South, the aim of this book is to bring a balanced approach to the current debate on the major issues affecting the development of biofuels in a concise and clear manner in order to provide an informed, nuanced but accessible introduction, grounded in science and economics rather than conjecture and controversy.

A Framework for Assessing Effects of the Food System National Research Council, Institute of Medicine, Board on Agriculture and Natural Resources, Food and Nutrition Board, Committee on a Framework for Assessing the Health, Environmental, and Social Effects of the Food System, 2015-06-17 How we produce and consume food has a bigger impact on Americans' well-being than any other human activity. The food industry is the largest sector of our economy; food touches everything from our health to the environment, climate change, economic inequality, and the federal budget. From the earliest developments of agriculture, a major goal has been to attain sufficient foods that provide the energy and the nutrients needed for a healthy, active life. Over time, food production, processing, marketing, and consumption have evolved and become highly complex. The challenges of improving the food system in the 21st century will require systemic approaches that take full account of social, economic, ecological, and evolutionary factors. Policy or business interventions involving a segment of the food system often have consequences beyond the original issue the intervention was meant to address. *A Framework for Assessing Effects of the Food System* develops an analytical framework for assessing effects associated with the ways in which food is grown, processed, distributed, marketed, retailed, and consumed in the United

States. The framework will allow users to recognize effects across the full food system, consider all domains and dimensions of effects, account for systems dynamics and complexities, and choose appropriate methods for analysis. This report provides example applications of the framework based on complex questions that are currently under debate: consumption of a healthy and safe diet, food security, animal welfare, and preserving the environment and its resources. A Framework for Assessing Effects of the Food System describes the U.S. food system and provides a brief history of its evolution into the current system. This report identifies some of the real and potential implications of the current system in terms of its health, environmental, and socioeconomic effects along with a sense for the complexities of the system, potential metrics, and some of the data needs that are required to assess the effects. The overview of the food system and the framework described in this report will be an essential resource for decision makers, researchers, and others to examine the possible impacts of alternative policies or agricultural or food processing practices.

The River Runs Black Elizabeth C. Economy, 2011-01-15 China's spectacular economic growth over the past two decades has dramatically depleted the country's natural resources and produced skyrocketing rates of pollution. Environmental degradation in China has also contributed to significant public health problems, mass migration, economic loss, and social unrest. In *The River Runs Black*, Elizabeth C. Economy examines China's growing environmental crisis and its implications for the country's future development. Drawing on historical research, case studies, and interviews with officials, scholars, and activists in China, the author traces the economic and political roots of China's environmental challenge and the evolution of the leadership's response. She argues that China's current approach to environmental protection mirrors the one embraced for economic development: devolving authority to local officials, opening the door to private actors, and inviting participation from the international community, while retaining only weak central control. The result has been a patchwork of environmental protection in which a few wealthy regions with strong leaders and international ties improve their local environments, while most of the country continues to deteriorate, sometimes suffering irrevocable damage. Economy compares China's response with the experience of other societies and sketches out several possible futures for the country. This second edition is updated with information about events during the past five years, covering China's tumultuous transformation of its economy and its landscape as it deals with the political implications of this behavior as viewed by an international community ever more concerned about climate change and dwindling energy resources.

*Economic Sanctions and American Diplomacy* Richard Haass, 1998 What cannot be disputed is that economic sanctions are increasingly at the center of American foreign policy: to stem the proliferation of weapons of mass destruction, promote human rights, discourage aggression, protect the environment, and thwart drug trafficking.

*Russian Nationalism Since 1856* Astrid S. Tuminez, 2000 This thoughtful book describes the range of nationalist ideas that have taken root in Russia since 1856. Drawing on a wide range of archival documents and unparalleled interview material from the post-Soviet period, Tuminez analyzes two cases\_Russian panslavism in 1856-1878 and great power nationalism in 1905-1914\_when aggressive nationalist ideas clearly influenced Russian foreign policy and contributed to decisions to go to war. Yet not all forms of nationalism have been malevolent, and the author assesses competing nationalist ideologies in the post-Soviet period to clarify the conditions under which a particularly belligerent nationalism could flourish and influence Russian international behavior.

*The World According to China* Elizabeth C. Economy, 2021-10-25 An economic and military superpower with 20 percent of the world's population, China has the wherewithal to transform the international system. Xi Jinping's bold calls for China to "lead in the reform of the global governance system" suggest that he has just such an ambition. But how does he plan to realize it? And what does it mean for the rest of the world? In this compelling book, Elizabeth Economy reveals China's ambitious new strategy to reclaim the country's past glory and reshape the geostrategic landscape in dramatic new ways. Xi's vision is one of Chinese centrality on the global stage, in which the mainland has realized its sovereignty claims over Hong Kong, Taiwan, and the South China Sea, deepened its global political, economic, and security reach through its grand-scale Belt and Road Initiative, and used its leadership in the United Nations and other institutions to align international norms and values, particularly around human rights, with those of China. It is a world radically different from that of today. The international community needs to understand and respond to the great risks, as well as the potential opportunities, of a world rebuilt by China.
