The Vertical Garden Patrick Blanc,2012 The inventor of the vertical garden showcases some of his favorite projects, which he has created all over the world for museums, hotels, skyscrapers, private homes and more.

Vitamin Green Joshua Bolchover,2012-05-12 Vitamin Green provides an up-to-the-minute look at the single most important topic in contemporary design: sustainability. This new attention to the life of the things we make is changing the way design is practiced on every level and will be at the center of discussions about architecture, landscape architecture, and product design in the twenty-first century. Projects nominated by an international collection of designers, curators, critics and thinkers were selected to create the best possible sourcebook of the most exciting and original green designs at all scales, from eyeglasses to landscapes and from motorcycles to skyscrapers. The result is an inspirational survey of the enormous amount of innovative work being done in this field, as well as a directory of products, ideas and techniques for both designers and consumers. Filled with projects that are built and in production, Vitamin Green provides a lively and inspiring visual definition of the term 'sustainable design', showing people what really can be achieved today.

Urban Meteorology National Research Council,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,Committee on Urban Meteorology: Scoping the Problem, Defining the Needs,2012-06-13 According to the United Nations, three out of five people will be living in cities worldwide by the year 2030. The United States continues to experience urbanization with its vast urban corridors on the east and west coasts. Although urban weather is driven by large synoptic and meso-scale features, weather events unique to the urban environment arise from the characteristics of the typical urban setting, such as large areas covered by buildings of a variety of heights; paved streets and parking areas; means to supply electricity, natural gas, water, and raw materials; and generation of waste heat and materials. Urban Meteorology: Forecasting, Monitoring, and Meeting Users' Needs is based largely on the information provided at a Board on

Atmospheric Sciences and Climate community workshop. This book describes the needs for end user communities, focusing in particular on needs that are not being met by current urban-level forecasting and monitoring. Urban Meteorology also describes current and emerging meteorological forecasting and monitoring capabilities that have had and will likely have the most impact on urban areas, some of which are not being utilized by the relevant end user communities. Urban Meteorology explains that users of urban meteorological information need high-quality information available in a wide variety of formats that foster its use and within time constraints set by users' decision processes. By advancing the science and technology related to urban meteorology with input from key end user communities, urban meteorologists can better meet the needs of diverse end users. To continue the advancement within the field of urban meteorology, there are both short-term needs-which might be addressed with small investments but promise large, quick returns-as well as future challenges that could require significant efforts and investments.

Urban Horticulture Shashank Shekhar Solankey,Shirin Akhtar,Alejandro Isabel Luna Maldonado,Humberto Rodriguez-Fuentes,Juan Antonio Vidales Contreras,Julia Mariana Márquez Reyes,2020-06-17 Urban horticulture is a means of utilizing every little space available in cities amidst buildings and other constructions for growing plants. It utilizes this space to raise gardens that can be economically productive while contributing to environmental greening. It can boost food and ornamental plants production, provide job opportunities, promote green space development, waste recycling, and urban landscaping, and result in improved environment. This book covers a wide array of topics on this subject and constitutes a valuable reference guide for students, professors, researchers, builders, and horticulturists concerned with urban horticulture, city planning, biodiversity, and the sustainable development of horticultural resources.

Vertical Gardens Hattie Klotz,2018-03-05 Do you have limited space but love the idea of a lush green garden on your balcony, your rooftop or your courtyard? Vertical Gardens is the ideal low maintenance, space-saving, water-smart solution! Vertical gardening is a fun, creative way to grow plants. All you need is a blank wall, a bare fence or an area that needs a green and flowering element to pretty it up and turn your bare spaces into gorgeous living walls. Follow the step by step instructions on how to create and customise your vertical garden to suit your own personal environment or need. Why not grow fresh herbs, or display annuals, even perennials, within your vertical garden. Vertical gardens are perfect for compact living spaces such as balcony gardens, rooftops, outdoor BBQ or dining areas, and courtyards. They also make great privacy screens in high density living environments, they're low to maintain, with water saving methods, Being practical, the leafy surrounds of the vertical garden can create a cooling and shade-enhancing effect to unsheltered balconies and help reduce heat in summer.

Evergreen Architecture gestalten,2021-06-08 Nature and architecture have never been more intertwined. As more of the

earth's surface is swallowed up by the built environment, architects are increasingly up to the task of integrating flora and greenery into their creations. There are many ways to express this: green roofs, living walls, indoor courtyards and entire facades filled with plants. But where these are posed as solutions there are yet more questions. How does a skyscraper uphold the weight of hundreds of trees? How do residents keep moss-covered walls alive? Jungle Architecture explores this, and much more.

Façade Greenery Chris van Uffelen, 2011 The greening of façades gives back a piece of nature to the built environment. Thanks to the vertical garden concept, the centuries old idea of a green wall emerging from the architecture itself has become a trend topic in the 21st century. But the planting of façades is more than just an extension to the form vocabulary of architecture : especially for ecological reasons, like improved building climate quality and optimized energy balance, it represents sustainable architecture. On the basis of texts, photographs, and plans, *FaçadeGreenery* documents the entire spectrum of this species, along with some of the most unusual contemporary examples.

"The Planetary Garden" and Other Writings Gilles Clément, 2015-06-19 Celebrated landscape architect Gilles Clément may be best known for his public parks in Paris, including the Parc André Citroën and the garden of the Musée du Quai Branly, but he describes himself as a gardener. To care for and cultivate a plot of land, a capable gardener must observe in order to act and work with, rather than against, the natural ecosystem of the garden. In this sense, he suggests, we should think of the entire planet as a garden, and ourselves as its keepers, responsible for the care of its complexity and diversity of life. *The Planetary Garden* is an environmental manifesto that outlines Clément's interpretation of the laws that govern the natural world and the principles that should guide our stewardship of the global garden of Earth. These are among the tenets of a humanist ecology, which posits that the natural world and humankind cannot be understood as separate from one another. This philosophy forms a thread that is woven through the accompanying essays of this volume: *Life, Constantly Inventive: Reflections of a Humanist Ecologist* and *The Wisdom of the Gardener*. Brought together and translated into English for the first time, these three texts make a powerful statement about the nature of the world and humanity's place within it.

Oceania Peter Brunt, Nicholas Thomas, 2018 Encompassing thousands of islands from the remote shores of Rapa Nui to the dense rainforest of Papua New Guinea, Oceania is one of the world's most extraordinary and diverse regions. This book, accompanying the spectacular exhibition at the Royal Academy opening this September, showcases Oceanic art and the subsequent migrations of people, cultures and objects from the Pacific around the world, from the unrivalled navigational feats of the first settlers who traversed the open ocean in wooden canoes to the explorations of Captain Cook 250 years ago. Bringing together the most up-to-date scholarship by experts in the field, this book presents Oceania through the eyes of its own people - artists, poets and photographers - who explore the legacy of the past and the future of a world and way of life

threatened by a changing climate. Featuring over 300 colour illustrations, and text from Peter Brunt, Senior Lecturer at Victoria University of Wellington; Nicholas Thomas, Director of the Museum of Archaeology and Anthropology, University of Cambridge; Noelle M.K.Y. Kahanu, Emmanuel Kasarhérou, Deputy Director of the Department of the Department of Heritage and Collections at Musée du quai Branly-Jacques Chirac, Paris; Sean Mallon, Senior Curator of Pacific Cultures at the Museum of New Zealand/Te Papa Tongarewa, Wellington; Michael Mel, Manager for Pacific and International Collections at the Australian Museum, Sydney; and Dame Anne Salmond DBE, Professor of Maori Studies at the University of Auckland.-- Royal Academy of Arts website (accessed 26/10/2018).

Green Cities of Europe Timothy Beatley, 2012-05-15 In the absence of federal leadership, states and localities are stepping forward to address critical problems like climate change, urban sprawl, and polluted water and air. Making a city fundamentally sustainable is a daunting task, but fortunately, there are dynamic, innovative models outside U.S. borders. Green Cities of Europe draws on the world's best examples of sustainability to show how other cities can become greener and more livable. Timothy Beatley has brought together leading experts from Paris, Freiburg, Copenhagen, Helsinki, Heidelberg, Venice, Vitoria-Gasteiz, and London to illustrate groundbreaking practices in sustainable urban planning and design. These cities are developing strong urban cores, building pedestrian and bicycle infrastructure, and improving public transit. They are incorporating ecological design and planning concepts, from solar energy to natural drainage and community gardens. And they are changing the way government works, instituting municipal green audits and reforming economic incentives to encourage sustainability. Whatever their specific tactics, these communities prove that a holistic approach is needed to solve environmental problems and make cities sustainable. Beatley and these esteemed contributors offer vital lessons to the domestic planning community about not only what European cities are doing to achieve that vision, but precisely how they are doing it. The result is an indispensable guide to greening American cities. Contributors include: Lucie Laurian (Paris) Dale Medearis and Wulf Daseking (Freiburg) Michaela Brüel (Copenhagen) Maria Jaakkola (Helsinki) Marta Moretti (Venice) Luis Andrés Orive and Rebeca Dios Lema (Vitoria-Gasteiz) Camilla Ween (London)

Future Park Amalie Wright, 2013-09-19 The first public parks were created on urban 'greenfields'. Once these designated sites had been used, cities looked towards post-industrial sites, and built parks in places that had suffered from environmental degradation, neglect, abandonment and conflict. With finite stocks of urban post-industrial land now also approaching exhaustion, more ways of making parks are required to create inclusive, accessible and resilient urban places. Future Park invites Australian built environment professionals and policymakers to consider the future of parks in our cities. Including spectacular images of public spaces throughout the world, the book describes the economic, social and environmental benefits of urban parks, and then outlines the threats and challenges facing cities and communities in an age when more than half the world's population are urban dwellers. Future Park introduces the need to embrace new public park

thinking to ensure that benefits continue to be realised. Future Park illustrates imaginative and resourceful responses to real challenges by highlighting recent proposals and projects. These projects coalesce around four broad themes – linkages, obsolescences, co-locations and installations – responding to contemporary urban paradoxes, and ensuring parks continue to play a vital role in the lives of our cities.

Paris Primitive Sally Price, 2007-10-15 In 1990 Jacques Chirac, the future president of France and a passionate fan of non-European art, met Jacques Kerchache, a maverick art collector with the lifelong ambition of displaying African sculpture in the holy temple of French culture, the Louvre. Together they began laying plans, and ten years later African fetishes were on view under the same roof as the Mona Lisa. Then, in 2006, amidst a maelstrom of controversy and hype, Chirac presided over the opening of a new museum dedicated to primitive art in the shadow of the Eiffel Tower: the Musée du Quai Branly. Paris Primitive recounts the massive reconfiguration of Paris's museum world that resulted from Chirac's dream, set against a backdrop of personal and national politics, intellectual life, and the role of culture in French society. Along with exposing the machinations that led to the MQB's creation, Sally Price addresses the thorny questions it raises about the legacy of colonialism, the balance between aesthetic judgments and ethnographic context, and the role of institutions of art and culture in an increasingly diverse France. Anyone with a stake in the myriad political, cultural, and anthropological issues raised by the MQB will find Price's account fascinating.

Imagine No. 01: Facades Ulrich Knaack, Tillmann Klein, Marcel Bilow, 2008 This book comprises various themes around imaginary facades and building envelopes. Aspects such as function integration, networking of elements, new structures and materials, as well as the addition of functions to existing structures are investigated in around 85 examples.

French Primitivism and the Ends of Empire, 1945-1975 Daniel J. Sherman, 2011-11-15 For over a century, the idea of primitivism has motivated artistic modernism. Focusing on the three decades after World War II, known in France as “les trentes glorieuses” despite the loss of most of the country's colonial empire, this probing and expansive book argues that primitivism played a key role in a French society marked by both economic growth and political turmoil. In a series of chapters that consider significant aspects of French culture—including the creation of new museums of French folklore and of African and Oceanic arts and the development of tourism against the backdrop of nuclear testing in French Polynesia—Daniel J. Sherman shows how primitivism, a collective fantasy born of the colonial encounter, proved adaptable to a postcolonial, inward-looking age of mass consumption. Following the likes of Claude Lévi-Strauss, Andrée Putman, and Jean Dubuffet through decorating magazines, museum galleries, and Tahiti's pristine lagoons, this interdisciplinary study provides a new perspective on primitivism as a cultural phenomenon and offers fresh insights into the eccentric edges of contemporary French history.

In Search of Utopia Jan van der Stock, 2016 2016 marks exactly 500 years since the English humanist and statesman Thomas More published in the city Leuven his world-famous book *Utopia*. Leuven is celebrating this milestone with a major city festival featuring exhibitions, street art, film, music, theatre, dance, literature, lectures and city walks. The cornerstone is the international, art historical exhibition 'In Search of Utopia' at M - Museum Leuven. The festival will officially start on Monday, 26 September 2016 after a festive opening weekend on 24 and 25 September and will end on 17 January 2017. In the book 'In Search of Utopia' the reader is introduced to the world of More and his friends, with the ideals and dreams of the times. The desire of far-away horizons and the cobweb of new sciences that patiently lay upon the reality. Magnificent works of the 15th- and 16th Century artists: Quinten Metsijs, Hans Holbein, Jan Gossaert en Albrecht Dürer are being brought together in this exciting and intriguing story. It shows in an unexceeded way the imagination of an ideal world.
