Bretherick's Handbook of Reactive Chemical Hazards L. Bretherick, 2016-10-27 Bretherick's Handbook of Reactive Chemical Hazards, Fourth Edition, has been prepared and revised to give access to a wide and up-to-date selection of documented information to research students, practicing chemists, safety officers, and others concerned with the safe handling and use of reactive chemicals. This will allow ready assessment of the likely potential for reaction hazards which may be associated with an existing or proposed chemical compound or reaction system. A secondary, longer-term purpose is to present the information in a way which will, as far as possible, bring out the causes of, and interrelationships between, apparently disconnected facts and incidents. This handbook includes all information which had become available to the author by April 1989 on the reactivity hazards of individual elements or compounds, either alone or in combination. It begins with an introductory chapter that provides an overview of the complex subject of reactive chemical hazards, drawing attention to the underlying principles and to some practical aspects of minimizing such hazards. This is followed by two sections: Section 1 provides detailed information on the hazardous properties of individual chemicals, either alone or in combination with other compounds; the entries in Section 2 are of two distinct types. The first type of entry gives general information on the hazardous behavior of some recognizably discrete classes or groups of the 4,600 or so individual compounds for which details are given in Section 1. The second type of entry concerns reactive hazard topics, techniques, or incidents which have a common theme or pattern of behavior involving compounds of several different groups, so that no common structural feature exists for the compounds involved.

The Risks of Multiple Breadbasket Failures in the 21st Century Anthony Janetos, Christopher Justice, Molly Jahn, Michael Obersteiner, Joseph Glauber, William Mulhern, 2017-03-06 According to the UN's Food and Agricultural Organization (Statistics Division 2016), a relatively small area of the world, 23 percent of total cropland, accounts for a large proportion of total global cereal production, with most of the area devoted to three major cereal crops: maize (70.3 percent),

wheat (69.3 percent), and rice (84.5 percent). In a recent study of global hotspots of heat stress due to climate change, Teixeira et al (2013) showed areas of Central Asia, East Asia, South Asia, and North America (40-60 degrees N.), which include the major grain producing areas of the world, as being particularly vulnerable. The structure of globalized food systems, with major constrictions in trade flows and highly concentrated areas of the world's food production, creates obvious vulnerabilities. Systematic evaluation of the likelihood of disruptive events in relation to each other and their potential impacts has not been done. Written by an interdisciplinary team of leading researchers, this Pardee Center Research Report describes a science research agenda toward improved probabilistic modeling and prediction of multiple breadbasket failures and the potential consequences for global food systems. The authors highlight gaps in the existing empirical foundation and analytical capabilities, and offer general approaches to address these gaps. They also suggest the need to fuse diverse data sources, recent observations, and new suites of dynamic models capable of connecting agricultural outcomes to elements of the global food system. The goal of these efforts is to provide better information concerning potential systemic risks to breadbaskets in various regions of the world to inform policies and decisions that have the potential for global impacts. This report stems from an international, interdisciplinary workshop organized by Knowledge Systems for Sustainability and hosted by the Frederick S. Pardee Center for the Study of the Longer-Range Future at Boston University, with support from Thomson Reuters, in November 2014.

Hot-Melt Extrusion Dennis Douroumis, 2012-04-24 Hot-melt extrusion (HME) - melting a substance and forcing it through an orifice under controlled conditions to form a new material - is an emerging processing technology in the pharmaceutical industry for the preparation of various dosage forms and drug delivery systems, for example granules and sustained release tablets. *Hot-Melt Extrusion: Pharmaceutical Applications* covers the main instrumentation, operation principles and theoretical background of HME. It then focuses on HME drug delivery systems, dosage forms and clinical studies (including pharmacokinetics and bioavailability) of HME products. Finally, the book includes some recent and novel HME applications, scale-up considerations and regulatory issues. Topics covered include: principles and the design of single screw extrusion twin screw extrusion techniques and practices in the laboratory and on production scale HME developments for the pharmaceutical industry solubility parameters for prediction of drug/polymer miscibility in HME formulations the influence of plasticizers in HME applications of polymethacrylate polymers in HME HME of ethylcellulose, hypromellose, and polyethylene oxide bioadhesion properties of polymeric films produced by HME taste masking using HME clinical studies, bioavailability and pharmacokinetics of HME products injection moulding and HME processing for pharmaceutical materials

Kansha Elizabeth Andoh, 2012-02-28 A celebration of Japan's vegan and vegetarian traditions with 100 vegan recipes. Kansha is an expression of gratitude for nature's gifts and the efforts and ingenuity of those who transform nature's bounty into marvelous food. The spirit of kansha, deeply rooted in Buddhist philosophy and practice, encourages all cooks to prepare nutritionally sound and aesthetically satisfying meals that avoid waste, conserve energy, and preserve our natural resources. In these pages, with kansha as credo, Japan culinary authority Elizabeth Andoh offers more than 100 carefully crafted vegan recipes. She has culled classics from shōjin ryōri, or Buddhist temple cuisine (Creamy Sesame Pudding, Glazed Eel Look-Alike); gathered essentials of macrobiotic cooking (Toasted Hand-Pressed Brown Rice with Hijiki, Robust Miso); selected dishes rooted in history (Skillet-Scrambled Tofu with Leafy Greens, Pungent Pickles); and included inventive modern fare (Eggplant Sushi, Tōfu-Tōfu Burgers). Decades of living immersed in Japanese culture and years of culinary training have given Andoh a unique platform from which to teach. She explains basic cutting techniques, cooking methods, and equipment that will help you enhance flavor, eliminate waste, and speed meal preparation. Then she demystifies ingredients that are staples in Japanese pantries that will boost your kitchen repertoire—vegan or omnivore—to new heights.

Tetrahedrally Bonded Amorphous Carbon Films I Bernd Schultrich, 2018-03-10 This book presents the status quo of the structure, preparation, properties and applications of tetrahedrally bonded amorphous carbon (ta-C) films and compares them with related film systems. Tetrahedrally bonded amorphous carbon films (ta-C) combine some of the outstanding properties of diamond with the versatility of amorphous materials. The book compares experimental results with the predictions of theoretical analyses, condensing them to practicable rules. It is strictly application oriented, emphasizing the exceptional potential of ta-C for tribological coatings of tools and components.

The Singularity Is Near Ray Kurzweil, 2005-09-22 "Startling in scope and bravado." —Janet Maslin, The New York Times "Artfully envisions a breathtakingly better world." —Los Angeles Times "Elaborate, smart and persuasive." —The Boston Globe "A pleasure to read." —The Wall Street Journal One of CBS News's Best Fall Books of 2005 • Among St Louis Post-

Dispatch's Best Nonfiction Books of 2005 • One of Amazon.com's Best Science Books of 2005 A radical and optimistic view of the future course of human development from the bestselling author of *How to Create a Mind* and *The Singularity is Nearer* who Bill Gates calls "the best person I know at predicting the future of artificial intelligence" For over three decades, Ray Kurzweil has been one of the most respected and provocative advocates of the role of technology in our future. In his classic *The Age of Spiritual Machines*, he argued that computers would soon rival the full range of human intelligence at its best. Now he examines the next step in this inexorable evolutionary process: the union of human and machine, in which the knowledge and skills embedded in our brains will be combined with the vastly greater capacity, speed, and knowledge-sharing ability of our creations.

Encounters of a Mathematician Walter Ledermann, 2010-02-01 Professor Walter Ledermann is one of the great algebraists of the twentieth century. His memoirs begin with life in pre-war Germany, the murder of several members of his family, and of the joy he found in mathematics and music. As the story of his remarkable life unfolds, we are entranced by tales of Scotland during the war and of academic life in Manchester and Sussex. His memoirs contain numerous entertaining, and often hilarious anecdotes of his encounters with famous mathematicians and physicists, such as Issai Schur, Heinz Hopf, Max Plank, Erwin Schroedinger, Edmund Whittaker, Alec Aitkin, Max Born and Alan Turing.

Multivariate Statistics: Wolfgang Härdle, Zdeněk Hlávka, 2007-07-27 The authors have cleverly used exercises and their solutions to explore the concepts of multivariate data analysis.
