Mechcomp2 Antonio J.M. Ferreira, Ana M.A. Neves, Erasmo Viola, Francesco Tornabene, Nicholas Fantuzzi, 2016-05-20 Composites materials have aroused a great interest over the last few decades. Several applications of fibrous composites, functionally graded materials, laminated composites, nano-structured reinforcements, morphing structures, can be found in many engineering fields, such as aerospace, mechanical, naval and civil engineering. The necessity of lightweight structures, smart and adaptive systems, high-level strength, have led both the academic research and the manufacturing development to a recurring employment of these materials. Many journal papers and technical notes have been published extensively over the last seventy years in international scientific journals of different engineering fields. For this reason, the establishment of this second edition of Mechanics of Composites International Conference has appeared appropriate to continue what has been begun during the first edition occurred in 2014 at Stony Brook University (USA). MECHCOMP wants to be an occasion for many researchers from each part of the globe to meet and discuss about the recent advancements regarding the use of composite structures. As a proof of this event, which has taken place in Porto (Portugal), selected plenary and key-note lectures have been collected in the present book.

Veterinary Virology Frank J. Fenner, Peter A. Bachmann, E. Paul J. Gibbs, 2014-06-28 Veterinary Virology deals with basic biomedical virology and the clinical discipline of infectious diseases. The book discusses the principles of virology as effecting future developments in the search for preventive and management of infectious diseases in animals, whether singly or as a whole herd or flock. Part I explains the principles of animal virology including the structure, composition, classification, nomenclature, cultivation, and assay of viruses. This part also discusses viral genetics, replication, and evolution (including mutation and genetic engineering). The book also reviews the pathogenesis of viruses, host resistance and susceptibility, as well as the mechanisms of persistent infections and tumor induction. Part II deals with viruses found in domestic animals; this part also explains in detail the properties, replication methods, pathogenesis, immunity, diagnosis, and control of some

common viruses. The book discusses some other families of viruses of which no members are yet known as to have caused serious or important diseases in animals. Veterinarians, immunologists, virologists, molecular researchers, students, and academicians in the discipline of virology and cellular biology, as well as livestock owners will find this book helpful.

Critique of Practical Reason Immanuel Kant, 2012-06-11 The second of Kant's three critiques, Critique of Practical Reason forms the center of Kantian philosophy; published in 1788, it is bookended by his Critique of Pure Reason and Critique of Judgement. With this work Kant establishes his role as a vindicator of the truth of Christianity; he approaches his proof by presenting positive affirmation of the immortality of the soul and the existence of God. The philosopher offers an argument concerning the summum bonum of life: people should not simply search after happiness, but follow the moral law and seek to become worthy of the happiness that God can bestow. This Critique comprises three sections: the Analytic, the Dialectic, and the Doctrine of Method. The Analytic defines the ultimate moral principle, the categorical imperative, and argues that to obey it is to exercise a freedom. The Dialectic makes the assumption that immortality and God exist, arguing that pure practical reason falls into error when it expects perfection in this world; we should anticipate finding perfection in the next world, with God's help. The final section, the Doctrine of Method, offers suggestions in educating people in the use of pure practical reason. A seminal text in the history of moral philosophy, this volume offers the most complete statement of Kant's theory of free will and a full development of his practical metaphysics.

Independent Private Dental Practice vs Dental Chains Ulrich Schmitz, 2020-06-17 Master's Thesis from the year 2020 in the subject Medicine - Dentistry, grade: 68, Manchester Metropolitan University Business School, language: English, abstract: This study casts light upon the future development of dental professional practice in Germany. Young dentists - members of Generation Y & Z - enter the market and look for work models which fit into their lifestyle. An analysis and evaluation of popular structures following current market trends explores four different business models for the operation of dental practices and work of dentists. As a central part of the research, the patient's view on the topic is introduced. Emphasis is placed on insights into patients' ideas and opinions about those models and to see whether a business model may

influence the choice of a new dentist. To explore the way to a decision, a patient may take, Kotler's 5-Stage Model of the Consumer Buying Process is adapted to the needs of this study. The 5th stage has not been included because it deals with the situation after a decision has been taken. At the same time, the link between consumer and patient is discussed. Guided by that model, a survey with patients of a German dental practice is conducted. A concurrent triangulation method design, consisting of a questionnaire and semi-structured interviews, is chosen for data collection. The questionnaire has contained questions on decision making following Kotler's model and additional questions on different providers of dental care. Over a period of eight working days, 61 questionnaires have been submitted, and four interviews have been conducted. The statistical evaluation has revealed results that are mainly consistent with the existing literature. Even today, personal recommendations from friends and family are the most important sources of information. Accessibility and technical equipment have been identified to be crucial features of a dental practice. However, the most critical characteristics recognised have been 'care by a consistent dentist' and 'personal contact with the administration'. Furthermore, it has been discovered that franchise models and dental chains are not considered in the choice of a practice.

The Critique of Judgment (Theory of the Aesthetic Judgment & Theory of the Teleological Judgment) Immanuel Kant, 2024-01-09 The Critique of Judgment, also translated as the Critique of the Power of Judgment and more commonly referred to as the third Critique, is a philosophical work by Immanuel Kant. Critique of Judgment completes the Critical project begun in the Critique of Pure Reason and the Critique of Practical Reason (the first and second Critiques, respectively). The book is divided into two main sections: the Critique of Aesthetic Judgment and the Critique of Teleological Judgment, and also includes a large overview of the entirety of Kant's Critical system, arranged in its final form. The end result of Kant's Critical Project is that there are certain fundamental antinomies in human Reason, most particularly that there is a complete inability to favor on the one hand the argument that all behavior and thought is determined by external causes, and on the other that there is an actual spontaneous causal principle at work in human behavior. Immanuel Kant (1724-1804) was a German philosopher, who, according to the Stanford Encyclopedia of Philosophy is the central figure of modern philosophy. Kant argued that fundamental concepts of the human mind structure human experience, that reason is the source of morality, that aesthetics arises from a faculty of disinterested judgment, that space and time are forms of our understanding, and that the world as it is in-itself is unknowable. Kant took himself to have effected a Copernican revolution in philosophy, akin to Copernicus' reversal of the age-old belief that the sun revolved around the earth.

Laminated Composite Doubly-Curved Shell Structures Francesco Tornabene, Michele Baccocchi, Nicholas Fantuzzi, Erasmo Viola, 2016-05-17 The title, “Laminated Composite Doubly-Curved Shell Structures. Differential and Integral Quadrature. Strong Form Finite Elements” illustrates the theme treated and the prospective followed during the composition of the present work. The aim of this manuscript is to analyze the static and dynamic behavior of thick and moderately thick composite shells through the application of the Differential Quadrature (DQ) method. The book is divided into two volumes wherein the principal higher order structural theories are illustrated in detail and the mechanical behavior of doubly-curved structures are presented by several static and dynamic numerical applications. In particular, the first volume is mainly theoretical, whereas the second one is mainly related to the numerical DQ technique and its applications in the structural field. The numerical results reported in the present volume are compared to the one available in the literature, but also to the ones obtained through several codes based on the Finite Element Method (FEM). Furthermore, an advanced version of the DQ method, termed Strong Formulation Finite Element Method (SFEM), is presented. The SFEM solves the differential equations inside each element in the strong form and implements the mapping technique typical of the FEM.

The Alien Disclosure Deception Charles Upton, 2021-10-05 This book tries to answer two questions: 1) Why has the U.S. Government suddenly done an about-face in 2021, from debunking UFOs to officially admitting that they are real? 2) Since UFOs appear on radar, leave physical traces, and produce a wide spectrum of psychic and paranormal phenomena, exactly what are they? The answer to the first question is: Because 'disclosure' is part of a long-term social engineering project beginning at least as early as the end of WWII. The answer to the second is: They are psycho-physical entities such as have been reported throughout human history, called the Jinn by the Muslims and Fairies by the Northern Europeans. The social engineers have opted to use this well-known phenomenon-whether or not they fully understand it-to shift the paradigm in the Western world from Democracy and Christianity to Technocracy and Transhumanism. Extensive evidence is given for both these theories, drawing upon history, individual and social psychology, traditional metaphysics and eschatology, the physical sciences, and the phenomenology of the paranormal, thus producing the most global and consistent explanation to date-if not the most easily accepted one-of the UFO phenomenon. Charles Upton, poet and metaphysician, was born on December 13, 1948, in San Francisco, CA. He is a protege of the Beat Generation, a veteran of the psychedelic counterculture, a peace activist, a Sufi Muslim, a writer of the Traditionalist/Perennialist School, and author of 20 books, mostly on metaphysics and social criticism. In 2013, along with Dr. John Andrew Morrow, he co-founded the international Muslim/Interfaith peace movement known as the Covenants Initiative, and is presently Executive Director of the Covenants of the Prophet Foundation. He has been writing on the subject of UFOs since 2001.
