Strawberry Mansion Allen Meyers, 1999-11-15 A section of North Philadelphia, Strawberry Mansion is nestled high on the banks of the Schuylkill River, adjacent to the large expanses of Fairmount Park, with many wonderful venues such as Woodside Park. The area became the setting for America's premiere Jewish Community in the 20th century, with over 50,000 inhabitants. Strawberry Mansion was the first Jewish suburb within an urban setting. Affectionately known as "the Mansion," it was only a trolley car ride away from the South Philadelphia immigrant district. Jewish families migrated from one neighborhood to another as they advanced economically in American society during the early 1900s. By the mid-1950s, the decision to discontinue the once heavily traveled route #9 trolley car marked the decline and eventual demise of Strawberry Mansion as a Jewish enclave.

Anthropology and Economy Stephen Gudeman, 2016-01-05 Comparative and critical, Anthropology and Economy offers a uniquely cross-cultural view of economy. Using examples from market and non-market situations, the book shows how economies are built on five increasingly abstract spheres, from the house to community, commerce, finance, and meta-finance. Across these spheres, economy incorporates a tension between self-interested rationality and the mutuality of social relationships. Even when rational processes predominate, as in markets, economies rely on sociability and ritual to operate, whether as cronyism, pleas to divinities or the magical persuasions of advertising. Drawing on data and concepts from anthropology and economics, the book addresses wealth inequality, resource depletion, and environmental devastation especially in capitalism, providing an understanding of their persistence and ideas for controlling them. Given the recent financial crash, Gudeman offers a different understanding of the crisis and suggestions for achieving greater economic stability.

Jumbuck's Misadventure Sally Nowlan,2020-05-27 A pet sheep's adventure that turns into a life threatening disaster. Jumbuck's Misadventure combines people's love and care of animals with the harsh reality of live export. JUMBUCK'S

MISADVENTURE is an original and topical story for young readers, that sees a much-loved pet sheep accidentally trapped in the dark world of live animal exports. Sally Nowlan uses her experience as a former sheep farmer, a vet nurse, and rural journalist to engage the reader with her detailed knowledge of rural life, and sheep. Rescued as a baby lamb and raised by Jill, a farmer's daughter, Jumbuck learns to do lots of clever things. He's way too smart for his own good, and of course, doesn't think he's a sheep. So it's not surprising that he gets into serious trouble. A terrible mistake lands Jumbuck on a doomed live export boat headed to the Middle East. He has to use all the skills he's learned to survive a terrifying situation. Jumbuck's Misadventure takes young readers, 8-12 years, to different and challenging places, from Jumbuck's life on the farm, to him being stuck in a feedlot, trapped on a boat in terrible conditions, then stranded on a deserted island. Like her character Jill, author Sally Nowlan grew up on the family sheep farm in NSW, which she later ran with her sister. I'm leaving it up to the reader to draw their own conclusions about this controversial trade, by presenting the facts imaginatively and first-hand - from the perspective of a sheep. It's realistic, but not gruesome, and gives insights into the special friendships between people and the animals they care for. The empathy in Maree Woolley's beautiful illustrations adds emotional reality to this story, which is based on a real life incident - the sinking of the MV Uniceb in 1996, which saw 62,000 sheep drown in the Indian Ocean.

With more than fifty iconic and new recipes, *Pizza Camp* delivers everything you'll need to make unforgettable and inventive pizza, stromboli, hoagies, and more, with plenty of vegetarian options (because even the most die-hard pizza lovers can't eat pizza every day). In this book you will find pizza combinations that have gained Beddia's pizzeria a cult following, alongside brand new recipes like: Dinosaur Kale, Pickled Red Onion, and Spring Cream Pizza Bintje Potato with Cream and Rosemary Speck, Collard Greens, Fontina, and Cream Roasted Corn with Heirloom Cherry Tomato and Basil Breakfast Pizza with Sausage, Eggs, Spinach, and Cream And dozens more! Designed by Walter Green, art director of Lucky Peach, and packed with drawings, neighborhood photos, and lots of humor, *Pizza Camp* is a novel approach to homemade pizza. Joe Beddia is hilarious, intelligent, and lovingly produces the best pizza in the f*cking universe." —Michael Solomonov, James Beard Award-winning chef and author

Defending Beef Nicolette Hahn Niman, 2021-07-20 "Nicolette Hahn Niman sets out to debunk just about everything you think you know . . . She's not trying to change your mind; she's trying to save your world."—Los Angeles Times "Elegant,

strongly argued.”—The Atlantic (named a “Best Food Book”) As the meat industry—from small-scale ranchers and butchers to sprawling slaughterhouse operators—responds to COVID-19, the climate threat, and the rise of plant-based meats, *Defending Beef* delivers a passionate argument for responsible meat production and consumption—in an updated and expanded new edition. For decades it has been nearly universal dogma among environmentalists that many forms of livestock—goats, sheep, and others, but especially cattle—are Public Enemy Number One. They erode soils, pollute air and water, damage riparian areas, and decimate wildlife populations. As recently as 2019, a widely circulated Green New Deal fact sheet even highlighted the problem of “farting cows.” But is the matter really so clear-cut? Hardly. In *Defending Beef*, Second Edition, environmental lawyer turned rancher Nicolette Hahn Niman argues that cattle are not inherently bad for the earth. The impact of grazing can be either negative or positive, depending on how livestock are managed. In fact, with proper oversight, livestock can play an essential role in maintaining grassland ecosystems by performing the same functions as the natural herbivores that once roamed and grazed there. With more public discussions and media being paid to connections between health and diet, food and climate, and climate and farming—especially cattle farming, *Defending Beef* has never been more timely. And in this newly revised and updated edition, the author also addresses the explosion in popularity of “fake meat” (both highly processed “plant-based foods” and meat grown from cells in a lab, rather than on the hoof). *Defending Beef* is simultaneously a book about big issues and the personal journey of the author, who continues to fight for animal welfare and good science. Hahn Niman shows how dispersed, grass-based, smaller-scale farms can and should become the basis of American food production.

Pollination in Plants Phatlane William Mokwala, Phetole Mangena, 2018-06-06 Plants are the basic source of food for both humans and animals. Most of the food is made of fruits and seeds. For these to be formed, pollination must first take place. This process is the transfer of pollen grains from the anther, which is the male structure of the flower, to the stigma on the female structure of the flower. The transfer process requires agents to be carried out. The agents can be either biotic or abiotic. Nature perfected this arrangement between the pollination agents and the plants. As ecosystems and agricultural systems are changing, this balanced arrangement becomes disturbed. This makes it necessary that pollination systems be

studied so that necessary measures can be undertaken to ensure productivity. The chapters of this book present results in research undertaken to improve productivity in crops such as *Actinidia chinensis* (the kiwifruit), *Theobroma cacao* (cocoa), and *Manicaria saccifera* (a tropical forest palm). Some results are presented on tests to check the viability of pollen grains and the delivery of sperm cells through pollen tubes to the embryo sac. These results can serve as guidelines to any person seeking to improve pollination and productivity or to check the efficiency on pollination in ecosystems or agricultural production systems.
