Unconventional Reservoir Geomechanics Mark D. Zoback, Arjun H. Kohli, 2019-05-16 A comprehensive overview of the key geologic, geomechanical and engineering principles that govern the development of unconventional oil and gas reservoirs. Covering hydrocarbon-bearing formations, horizontal drilling, reservoir seismology and environmental impacts, this is an invaluable resource for geologists, geophysicists and reservoir engineers.

The Jersey Devil James F. McCloy, Ray Miller, 1976 In the course of its extraordinary history, the Jersey Devil has been exorcised, shot, electrocuted, declared officially dead, and scoffed as foolishness--none of which has had any effect on it or the people who persist in seeing it! This mysterious creature is said to prowl the lonely sand trails and mist-shrouded marshes of the Pine Barrens, and emerge periodically to rampage through the towns and cities of New Jersey and eastern Pennsylvania, leaving many communities in near-hysteria. The authors show that while a few appearances have been outright fraud and others have likely been the result of mass hysteria, this creature has been seen by enough sane, sober, and responsible citizens to keep the possibility of its existence alive and tantalizing. Empire of Water David Soll, 2013-04-16 Supplying water to millions is not simply an engineering and logistical challenge. As David Soll shows in his finely observed history of the nation's largest municipal water system, the task of providing water

to New Yorkers transformed the natural and built environment of the city, its suburbs, and distant rural watersheds. Almost as soon as New York City completed its first municipal water system in 1842, it began to expand the network, eventually reaching far into the Catskill Mountains, more than one hundred miles from the city. *Empire of Water* explores the history of New York City's water system from the late nineteenth century to the early twenty-first century, focusing on the geographical, environmental, and political repercussions of the city's search for more water. Soll vividly recounts the profound environmental implications for both city and countryside. Some of the region's most prominent landmarks, such as the High Bridge across the Harlem River, Central Park's Great Lawn, and the Ashokan Reservoir in Ulster County, have their origins in the city's water system. By tracing the evolution of the city's water conservation efforts and watershed management regime, Soll reveals the tremendous shifts in environmental practices and consciousness that occurred during the twentieth century. Few episodes better capture the long-standing upstate-downstate divide in New York than the story of how mountain water came to flow from spigots in Brooklyn and Manhattan. Soll concludes by focusing on the landmark watershed protection agreement signed in 1997 between the city, watershed residents, environmental organizations, and the state and federal governments. After decades of rancor between the city and Catskill residents, the two sides set aside their differences to forge a new model of environmental stewardship. His account of this unlikely environmental success story offers a behind the scenes perspective on the nation's most ambitious and wide-ranging watershed protection program.

My Volcano John Elizabeth Stintzi, 2022-03-22 * Winner of the Sator New Works Award. * New York Public Library's Best Books of 2022 * Kirkus Reviews' Best Fiction Books of 2022 * 2022 Brooklyn Public Library Book Prize, Longlist. * A Most Anticipated Book —Lambda Literary, Vol. 1 Brooklyn, Tor.com, The Chicago Review of Books, LGBTQReads, Ms. Magazine, The Mary Sue My Volcano is a kaleidoscopic portrait of a menagerie of characters, as they each undergo personal eruptions, while the Earth itself is constantly shifting. Parable, myth, science-fiction, eco-horror, My Volcano is a radical work of literary art, emerging as a subversive, intoxicating artistic statement by John Elizabeth Stintzi. On June 2, 2016, a protrusion of rock growing from the Central Park Reservoir is spotted by a jogger. Three weeks later, when it finally stops growing, it's nearly two-and-a-half miles tall, and has been determined to be an active volcano. As the volcano grows and then looms over New York, an eight-year-old boy in Mexico City finds himself transported 500 years into the past, where he witnesses the fall of the Aztec Empire; a Nigerian scholar in Tokyo studies a folktale about a woman of fire who descends a mountain and destroys an entire village; a white trans writer in Jersey City struggles to write a sci-fi novel about a thriving civilization on an impossible planet; a nurse tends to Syrian refugees in Greece while grappling with the trauma of living through the

bombing of a hospital in Kunduz, Afghanistan; a nomadic farmer in Mongolia is stung by a bee, magically transforming him into a green, thorned, flowering creature that aspires to connect every living thing into its consciousness. With its riveting and audacious vision, *My Volcano* is a tapestry on fire, a distorted and cinematic new work from the fiercely talented John Elizabeth Stintzi.

Review of the New York City Department of Environmental Protection Operations Support Tool for Water Supply National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Committee to Review the New York City Department of Environmental Protection Operations Support Tool for Water Supply, 2019-01-11 New York City's water supply system is one of the oldest, largest, and most complex in the nation. It delivers more than 1.1 billion gallons of water each day from three upstate watersheds (Croton, Catskill, and Delaware) to meet the needs of more than eight million people in the City, one million people in Westchester, Putnam, Orange, and Ulster counties, and millions of commuters and tourists who visit the City throughout the year. The Catskill and Delaware portions, which make up about 90 percent of the supply, receive no filtration or treatment other than disinfection, except for rare instances of high turbidity when a coagulant is added to increase deposition of suspended solids. The remaining 10 percent of the supply comes from the Croton watershed and receives treatment via filtration. The drinking water supply is managed by the Bureau of Water Supply within the New York City Department of Environmental Protection (NYC DEP). To continue to avoid filtration of the Catskill/Delaware portion of the water supply, in 2007, NYC DEP reexamined its control of turbidity in the Catskill portion of the water supply, including both structural improvements to the system and operational changes. The Operations Support Tool (OST) was developed as part of these efforts. OST couples models of reservoir operations and water quality; it uses real-time data on streamflow, snow pack, water quality, reservoir levels, diversions, and releases; and it incorporates streamflow forecasts—all in order to predict future reservoir levels, water delivery to customers, and water quality within the system. These predictions inform the system operators, who then make decisions based on the most current data and forecasts. This report reviews the use of OST in current and future reservoir operations. It considers potential ways in which the City can more effectively use OST, makes recommendations for additional performance measures, and reviews the potential effects of climate change on the City's water supply to help identify and enhance understanding of areas of potential future concern with regard to the use of OST.

The Things They Carried Tim O'Brien, 2009-10-13 Look for O'Brien's new book, *American Fantastica*, on sale October 24th A classic work of American literature that has not stopped changing minds and lives since it burst onto the literary scene, *The Things They Carried* is a ground-breaking meditation on war, memory, imagination, and the redemptive power of storytelling. *The Things They Carried* depicts the men of Alpha Company: Jimmy Cross, Henry Dobbins, Rat Kiley, Mitchell Sanders, Norman Bowker, Kiowa, and the character Tim O'Brien, who has survived his tour in Vietnam to become a father

and writer at the age of forty-three. Taught everywhere—from high school classrooms to graduate seminars in creative writing—it has become required reading for any American and continues to challenge readers in their perceptions of fact and fiction, war and peace, courage and fear and longing. *The Things They Carried* won France's prestigious Prix du Meilleur Livre Etranger and the Chicago Tribune Heartland Prize; it was also a finalist for the Pulitzer Prize and the National Book Critics Circle Award.

Inverse Theory for Petroleum Reservoir Characterization and History Matching Dean S. Oliver, Albert C. Reynolds, Ning Liu, 2018-03-01 This book is a guide to the use of inverse theory for estimation and conditional simulation of flow and transport parameters in porous media. It describes the theory and practice of estimating properties of underground petroleum reservoirs from measurements of flow in wells, and it explains how to characterize the uncertainty in such estimates. Early chapters present the reader with the necessary background in inverse theory, probability and spatial statistics. The book demonstrates how to calculate sensitivity coefficients and the linearized relationship between models and production data. It also shows how to develop iterative methods for generating estimates and conditional realizations. The text is written for researchers and graduates in petroleum engineering and groundwater hydrology, and can be used as a textbook for advanced courses on inverse theory in petroleum engineering. It includes many worked examples to demonstrate the methodologies and a selection of exercises.

Review of the New York City Watershed Protection Program National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Committee to Review the New York City Watershed Protection Program, 2021-01-04 New York City's municipal water supply system provides about 1 billion gallons of drinking water a day to over 8.5 million people in New York City and about 1 million people living in nearby Westchester, Putnam, Ulster, and Orange counties. The combined water supply system includes 19 reservoirs and three controlled lakes with a total storage capacity of approximately 580 billion gallons. The city's Watershed Protection Program is intended to maintain and enhance the high quality of these surface water sources. Review of the New York City Watershed Protection Program assesses the efficacy and future of New York City's watershed management activities. The report identifies program areas that may require future change or action, including continued efforts to address turbidity and responding to changes in reservoir water quality as a result of climate change.

Watershed Management for Potable Water Supply National Research Council, Commission on Geosciences, Environment, and Resources, Water Science and Technology Board, Committee to Review the New York City Watershed Management Strategy, 2000-02-17 In 1997, New York City adopted a mammoth watershed agreement to protect its drinking water and avoid filtration of its large upstate surface water supply. Shortly thereafter, the NRC began an analysis of the agreement's scientific validity. The resulting book finds New York City's watershed agreement to be a good template for

proactive watershed management that, if properly implemented, will maintain high water quality. However, it cautions that the agreement is not a guarantee of permanent filtration avoidance because of changing regulations, uncertainties regarding pollution sources, advances in treatment technologies, and natural variations in watershed conditions. The book recommends that New York City place its highest priority on pathogenic microorganisms in the watershed and direct its resources toward improving methods for detecting pathogens, understanding pathogen transport and fate, and demonstrating that best management practices will remove pathogens. Other recommendations, which are broadly applicable to surface water supplies across the country, target buffer zones, stormwater management, water quality monitoring, and effluent trading.

The Croton Dams and Aqueduct Christopher R. Tompkins, 2000 This collection of rare photographs chronicles the construction of one of the largest masonry dams ever built. From the beginnings of the first Croton Dam, completed in 1842, and of the new dam, which was finished in 1907, up to the present day, *The Croton Dams and Aqueduct* provides a stunning portrait of the entire project and the region that it impacted: New York City and Westchester County. As early as the 1770s, New York considered creating waterworks and even proposed damming area rivers, including the Hudson. With disease and fires blamed on the lack of water, plans were created c. 1830 to dam the Croton River. By 1842, water from the first dam flowed into New York City from Yorktown. Built to provide enough water for centuries, the first dam was obsolete by the 1880s. Exponential growth from immigration created the demand for more water, and New York built the New Croton Dam. The new dam not only provided clean water for New York's burgeoning population but also spawned a new community of immigrant workers in the once Anglo community of Westchester County.

Urban Ornithology P. A. Buckley, Walter Sedwitz, William J. Norse, John Kieran, 2018-12-15 *Urban Ornithology* is the first quantitative historical analysis of any New York City natural area's birdlife and spans the century and a half from 1872 to 2016. Only Manhattan's Central and Brooklyn's Prospect Parks have preliminary species lists, not revised since 1967, and the last book examining the birdlife of the entire New York City area is now more than fifty years old. This book updates the avifaunas of those two parks, the Bronx, and other New York City boroughs. It treats the 301 bird species known to have occurred within its study area—Van Cortlandt Park and the adjacent Northwest Bronx—plus 70 potential additions. Its 123 breeding species are tracked from 1872 and supplemented by quantitative breeding bird censuses from 1937 to 2015. Gains and losses of breeding species are discussed in light of an expanding New York City inexorably extinguishing unique habitats.

Reservoir Geomechanics Mark D. Zoback, 2010-04-01 This interdisciplinary book encompasses the fields of rock mechanics, structural geology and petroleum engineering to address a wide range of geomechanical problems that arise during the exploitation of oil and gas reservoirs. It considers key practical issues such as prediction of pore pressure,

estimation of hydrocarbon column heights and fault seal potential, determination of optimally stable well trajectories, casing set points and mud weights, changes in reservoir performance during depletion, and production-induced faulting and subsidence. The book establishes the basic principles involved before introducing practical measurement and experimental techniques to improve recovery and reduce exploitation costs. It illustrates their successful application through case studies taken from oil and gas fields around the world. This book is a practical reference for geoscientists and engineers in the petroleum and geothermal industries, and for research scientists interested in stress measurements and their application to problems of faulting and fluid flow in the crust.

Traveling the Pennsylvania Railroad William Herman Rau, 2002-03-26 This volume reproduces almost 100 remarkably detailed and texturally rich photographs. Essays by noted historians John Stilgoe, Mary Panzer, and Kenneth Finkel place Rau and his work in the context of the history of American advertising and landscape photography.
