Annual Report United States. Migratory Bird Conservation Commission, 1989

Season at the Point Thomas Connor, 1994 Conveys the story of the birds and birders that gather in Cape May Point, N.J., describing the adaptations, migratory patterns, and aerodynamics of the birds.

Remembering South Cape May Joseph G. Burcher, 2010-07-30 Few would imagine that the land currently occupied by the Nature Conservancy's Cape May Migratory Bird Refuge, or the Meadows, ? was once the picturesque Jersey Shore town of South Cape May. By the early twentieth century, a striking hotel and homes designed by renowned Victorian-era architects dotted the landscape. Residents and visitors alike spotted rumrunners racing across the beachfront during Prohibition and endured World War II with German submarines lurking just offshore. But by 1954, barely a trace of the town remained except for about twenty of the original houses, which were moved a mile away. Join one of the town's last residents, Joseph Burcher, as he chronicles life in South Cape May before the angry Atlantic swallowed this serene town.

A World on the Wing: The Global Odyssey of Migratory Birds Scott Weidensaul,2021-03-30
New York Times Bestseller Finalist for the Los Angeles Times Book Prize A Library Journal Best Science and Technology Book of the Year
An exhilarating exploration of the science and wonder of global bird migration. In the past two decades, our understanding of the navigational and physiological feats that enable birds to cross immense oceans, fly above the highest mountains, or

remain in unbroken flight for months at a stretch has exploded. What we've learned of these key migrations—how billions of birds circumnavigate the globe, flying tens of thousands of miles between hemispheres on an annual basis—is nothing short of extraordinary. Bird migration entails almost unfathomable endurance, like a sparrow-sized sandpiper that will fly nonstop from Canada to Venezuela—the equivalent of running 126 consecutive marathons without food, water, or rest—avoiding dehydration by drinking moisture from its own muscles and organs, while orienting itself using the earth's magnetic field through a form of quantum entanglement that made Einstein queasy. Crossing the Pacific Ocean in nine days of nonstop flight, as some birds do, leaves little time for sleep, but migrants can put half their brains to sleep for a few seconds at a time, alternating sides—and their reaction time actually improves. These and other revelations convey both the wonder of bird migration and its global sweep, from the mudflats of the Yellow Sea in China to the remote mountains of northeastern India to the dusty hills of southern Cyprus. This breathtaking work of nature writing from Pulitzer Prize finalist Scott Weidensaul also introduces readers to those scientists, researchers, and bird lovers trying to preserve global migratory patterns in the face of climate change and other environmental challenges. Drawing on his own extensive fieldwork, in *A World on the Wing* Weidensaul unveils with dazzling prose the miracle of nature taking place over our heads.

The book features more than 260 sites in Maine and includes bonus material on Campobello and Grand Manan islands.
