**Remote Sensing Handbook for Tropical Coastal Management** Edmund Peter Green,2000 The Handbook provides a detailed evaluation of what can realistically be achieved by remote sensing in an operational coastal management context. It takes the user through the planning and implementation of remote sensing projects from the setting of realistic objectives, deciding which imagery will be most appropriate to achieve those objectives, the acquisition, geometric and radiometric correction of imagery, the field survey methods needed to ground-truth the imagery and guide image classification, the image processing techniques required to optimise outputs, through the image interpretation and evaluation of the accuracy of outputs. Linked to the Handbook is a computer-based remote sensing distance-learning module: Applications of satellite and airborne image data to coastal management available free of charge via [www.unesco.bilko.org](http://www.unesco.bilko.org)

**Chasing Centuries** Ron Parker,2019 Chasing Centuries is a one-of-a-kind travel-history book that takes the reader along on an exciting and little known adventure at the crossroads of archaeology and botany that examines the depth and duration of human/Agave coevolution across the desert southwest. Travel with author Ron Parker as he discovers interesting assortments of unusual agaves apparently associated with archaeological sites long since abandoned by residents of extinct ancient cultures. These agaves appear to be anthropogenic cultivars; living archaeological relics developed and planted by indigenous pre-Columbian Native Americans, and many are still growing exactly where they were planted hundreds of years ago.

*Sea-Run Cutthroat* Jay Nicholas,2016-12-03 Summary: This book provides a modern review of the *Oncorhynchus clarki clarki* life history, behaviors in the Oregon estuaries and rivers, discusses fly fishing strategies, and shows photographs and tying recipes for 60 great fly patterns that cover the wide range of fly styles that the sea run cutthroat respond well to. I offer my interpretation of old and new science, the species' native response to flies, and how anyone-beginner to expert-might approach fishing for these gamefish in new waters.

*Seafloor Geomorphology as Benthic Habitat* Peter Harris,Elaine Baker,2011-11-28 Annotation This book provides a synthesis of seabed geomorphology and benthic habitats based on the most recent, up-to-date information. Case studies from around the world are presented.

Reptile Biodiversity Roy W. McDiarmid,Mercedes S. Foster,Craig Guyer,Neil Chernoff,J. Whitfield Gibbons,2012-01-10

“Authoritative and comprehensive—provides an up-to-date description of the tool box of methods for inventorying and monitoring the diverse spectrum of reptiles. All biodiversity scientists will want to have it during project planning and as study progresses. A must for field biologists, conservation planners, and biodiversity managers.”—Jay M. Savage, San Diego State University “Kudos to the editors and contributors to this book. From the perspective of a non-ecologist such as myself, who only occasionally needs to intensively sample a particular site or habitat, the quality and clarity of this book has been well worth the wait.”—Jack W. Sites, Jr.

**Urban Soils** Andrew W. Rate, 2022-01-07 This textbook addresses the increasing trend in urbanization of the world’s population and its relation with urban soils. Written by active practitioners of university level teaching and research, this book is designed primarily as an educational text, while it also provides readers with an authoritative gateway to the primary literature. It includes explicit coverage of spatial and statistical (multivariate) techniques and case studies to illustrate key concept, and to support practical guidance in issues such as data collection and analysis. The authors reflect current developments in research and urban trends. In China, for example, the proportion of the population living in cities increased from 13% in 1950 to 45% in 2010 (World Bank data). Australia is one of the world's top ten urbanised countries with population greater than ten million, with approximately 90% of its population living in cities, mainly along Australia's coast. The most rapidly urbanising populations are currently in nations of the African continent. Soils in urban areas have multiple functions which are becoming more valued by urban communities: soils supply water, nutrients and physical support for urban plant and animal communities (parks, reserves, gardens), and are becoming increasingly valued for growing food. Soils may be used for building foundations, or as building materials themselves. Urban hydrology relies on the existence of unsealed soils for aquifer protection and flood control. This volume presents the importance of urban ecosystems and the impacts of global change. It examines pedogenesis of urban soils: natural materials affected by urban phenomena, and natural processes acting on urban materials, including an examination of different climatic zones. There is a focus on soils formed on landfill, reclaimed land, dredge spoils as well as soil-related changes in urban geomorphology. There is plenty of discussion on urban soil as a source and sink as well as soil geochemistry and health. The book is intended primarily as a text for upper-level undergraduate, and postgraduate (Masters) students. It will also be invaluable as a resource for professionals such as researchers, environmental regulators, and environmental consultants.

Universe and Inner Self in Early Indian and Early Greek Thought Seaford Richard Seaford, 2016-07-11 From the sixth century BCE onwards there occurred a revolution in thought, with novel ideas such as such as that understanding the inner self is both vital for human well-being and central to understanding the universe. This intellectual transformation is

sometimes called the beginning of philosophy. And it occurred - independently it seems - in both India and Greece, but not in the vast Persian Empire that divided them. How was this possible? This is a puzzle that has never been solved. This volume brings together Hellenists and Indologists representing a variety of perspectives on the similarities and differences between the two cultures, and on how to explain them. It offers a collaborative contribution to the burgeoning interest in the Axial Age and will be of interest to anyone intrigued by the big questions inspired by the ancient world.

**Climate Change and Terrestrial Carbon Sequestration in Central Asia** Rattan Lal, M. Suleimenov, B.A. Stewart, D.O. Hansen, 2007-08-02 This book brings together current knowledge of terrestrial C sequestration in Central Asia. The themes treated include: biophysical environments, water resources, sustainable agriculture, soil degradation, the effects of irrigation schemes on secondary salinization, soil management and its relationship to carbon dynamics; the relationship between f

**The Pied Flycatcher** Arne Lundberg, Rauno V. Alatalo, 2010-10-30 The Pied Flycatcher is one of Europe's best-studied species. The first detailed work on it was begun in the 1930s by German ornithologists, but it was Lars von Haartman's Finnish study that both established long-term research on the species and founded many of the central themes of modern ornithology. Soon after, in the late 1940s, Bruce Campbell set up an intensive project in southwest England, which also still runs to this day. Many other eminent ornithologists followed and in 1979 Arne Lundberg and Rauno Alatalo started their own work in Sweden, Finland and latterly the north of England. A Palearctic migrant, the Pied Flycatcher is notable for its very variable male plumage and complex territorial and polygynous breeding system. They take readily to nest boxes and have provided excellent opportunities for the study of a wide range of biological problems. This broad review of the species provides not only a detailed biology of this fascinating little bird, but a commentary on many of the most interesting problems in bird behaviour and ecology. Illustrated by Tomas Part.

**Punitive Damages** Cass R. Sunstein, Reid Hastie, John W. Payne, David A. Schkade, W. Kip Viscusi, 2008-12-19 Over the past two decades, the United States has seen a dramatic increase in the number and magnitude of punitive damages verdicts rendered by juries in civil trials. Probably the most extraordinary example is the July 2000 award of \$144.8 billion in the Florida class action lawsuit brought against cigarette manufacturers. Or consider two recent verdicts against the auto manufacturer BMW in Alabama. In identical cases, argued in the same court before the same judge, one jury awarded \$4 million in punitive damages, while the other awarded no punitive damages at all. In cases involving accidents, civil rights, and the environment, multimillion-dollar punitive awards have been a subject of intense controversy. But how do juries actually make decisions about punitive damages? To find out, the authors-experts in psychology, economics, and the law-present the results of controlled experiments with more than 600 mock juries involving the responses of more than 8,000 jury-eligible citizens. Although juries tended to agree in their moral judgments about the defendant's conduct, they rendered erratic and unpredictable dollar awards. The experiments also showed that instead of moderating juror verdicts, the process

of jury deliberation produced a striking severity shift toward ever-higher awards. Jurors also tended to ignore instructions from the judges; were influenced by whatever amount the plaintiff happened to request; showed hindsight bias, believing that what happened should have been foreseen; and penalized corporations that had based their decisions on careful cost-benefit analyses. While judges made many of the same errors, they performed better in some areas, suggesting that judges (or other specialists) may be better equipped than juries to decide punitive damages. Using a wealth of new experimental data, and offering a host of provocative findings, this book documents a wide range of systematic biases in jury behavior. It will be indispensable for anyone interested not only in punitive damages, but also jury behavior, psychology, and how people think about punishment.

**Miniature Vignettes** Susan Rogers Braun,1975

Mangrove Ecosystems of Asia I. Faridah-Hanum,A. Latiff,Khalid Rehman Hakeem,Munir Ozturk,2013-11-01 The book provides an up-to-date account of mangrove forests from Asia, together with restoration techniques, and the management requirements of these ecosystems to ensure their sustainability and conservation. All aspects of mangroves and their conservation are critically re-examined. The book is divided into three sections presenting the distribution and status of mangrove ecosystems in Asia, the challenges they are facing, their issues and opportunities, and the management strategies for their conservation.

**Was Man More Aquatic in the Past? Fifty Years After Alister Hardy - Waterside Hypotheses of Human Evolution** Mario Vaneechoutte,Algis Kuliukas,Marc Verhaegen,2011 The book starts from the observation that humans are very different from the other primates. Why are we naked? Why do we speak? Why do we walk upright? Fifty years ago, in 1960, marine biologist Sir Alister Hardy tried to answer this when he announced his so-called aquatic hypothesis: human ancestors did not live in dry savannahs as traditional anthropology assumes, but have adapted to live at the edge between land and water, gathering both terrestrial and aquatic foods. This eBook is an up-to-date collection of the views of the most important protagonists of this long-neglected theory of huma.

Virus Dynamics Martin Nowak,Robert M. May,2000-11-23 This groundbreaking book describes the emerging field of theoretical immunology, in particular the use of mathematical models to describe the spread of infectious diseases within patients. It reveals fascinating insights into the dynamics of viral and other infections, and the interactions between infectious agents and immune responses. Structured around the examples of HIV/AIDS and hepatitis B, Nowak and May show how mathematical models can help researchers to understand the detailed dynamics of infection and the effects of antiviral therapy. Models are developed to describe the dynamics of drug resistance, immune responses, viral evolution and mutation, and to optimise the design of therapy and vaccines.

**From Cave Man to Cave Martian** Manfred "Dutch" von Ehrenfried, 2019-04-05 This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a "Short Stay" Opposition Class mission to Mars as the first mission rather than the "Long Stay" concept requiring a mission that is too long, too dangerous and too costly for man's first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.

**Uncertain Science ... Uncertain World** Henry N. Pollack, 2005-06-23 Is the world warming due to the Greenhouse Effect? Can nuclear weapon arsenals be relied upon without periodic testing? Is the world running out of oil? What action should be taken against an outbreak of foot-and-mouth or BSE? Why can't scientists provide certain answers to these and many other questions? The uncertainty of science is puzzling. It arises when scientists have more than one answer to a problem or disagree amongst themselves. In this engaging book, Henry Pollack guides the reader through the maze of contradiction and uncertainty, acquainting them with the ways that uncertainty arises in science, how scientists accommodate and make use of uncertainty, and how in the face of uncertainty they reach their conclusions. Taking examples from recent science headlines and every day life, *Uncertain Science ... Uncertain World* enables the reader to evaluate uncertainty from their own perspectives, and find out more about how science actually works.

**The Ecology of Sandy Shores** A.C. Brown, Anton McLachlan, 2010-07-27 *The Ecology of Sandy Shores* provides the students and researchers with a one-volume resource for understanding the conservation and management of the sandy shore ecosystem. Covering all beach types, and addressing issues from the behavioral and physiological adaptations of the biota to exploring the effects of pollution and the impact of man's activities, this book should become the standard reference for those interested in Sandy Shore study, management and preservation. More than 25% expanded from the previous edition Three entirely new chapters: Energetics and Nutrient Cycling, Turtles and Terrestrial Vertebrates, and Benthic Macrofauna Populations New sections on the interstitial environment, seagrasses, human impacts and coastal zone management Examples drawn from virtually all parts of the world, considering all beach types from the most exposed to the most sheltered
