The Neurocognition of Language Colin M. Brown,Peter Hagoort,1999-09-02 An important and captivating book, one that has been long awaited by all researchers interested in language and the brain.' Trends in Cognitive Sciences, 1999. The Neurocognition of Language brings together experts on human language and the brain to present the first critical overview of the cognitive neuroscience of language, one of the fastest-moving and most exciting areas today. In-depth discussion of the representations and structures of language, as well as of the cognitive architectures which underlie speaking, listening, and reading, will provide a basis for future brain imaging research. In addition, the existing brain imaging literature on word and sentence processing is critically reviewed, as well as contributions from brain lesion data. Finally, the book discusses the prospects and problems of brain imaging techniques for the study of language, presents some of the most recent and promising analytic procedures for relating brain imaging data to the higher cognitive functions, and contains a review of the neuroanatomical structure of Broca's language area. Uniquely interdisciplinary, this book will provide researchers and students in cognitive neuroscience with state-of-the-art reviews of the major language functions, while being of equal interest to researchers in linguistics and language who want to learn about the neural bases of language. It will be an essential purchase for anyone requiring an overview of our current understanding of the relation between language and the brain.

Organic Farming William Lockeretz,2007-01-01 This book discusses organic farming with regards to the origins and principles, policies and markets, organizations and institutions, and future concepts.

Look to the Land Lord Northbourne,2005-03 'Without vision the people perish.' So wrote the poet William Blake. Lord Northbourne (1896-1982) was a man of exceptional and comprehensive vision, who diagnosed the sickness of modern society as stemming from the severance of its organic links with the wholeness of life. But like his better-known younger contemporary E. F. Schumacher (author of *Small is Beautiful*), whose work developed along very similar lines, Northbourne's occupation as a practicing organic farmer (he coined the term) was joined to a deep conviction that humanity does not live by bread alone, and that the fullness of life properly integral to human nature demands obedience to sacred law. Thus his vision

of life came to embrace the interrelationship of God, humanity, and the soil as a unity presupposing a way of life in stark contrast to that of the myopic, mechanistic world he saw encroaching on all sides. And so, as it becomes increasingly evident that such a way of life stands to imperil our very future and that of the delicate ecosystem on which all life depends, it is time to re-examine the work of this pioneering thinker. In an age of specialization and fragmentation, we have much to learn from Northbourne, whose vision of what is required by a truly meaningful and sustainable society embraced religion, farming, the arts, the rural crafts, monetary form, and traditional metaphysics. Northbourne's later works, *Religion in the Modern World* and *Looking Back on Progress*, present his wider reflections on the Divine and human society, but always with the sensibility of a man who knows the soil, recalling in many ways the writings of Wendell Berry. He corresponded with Thomas Merton, as well as mountaineer and Tibetan Buddhist Marco Pallis (*The Way and the Mountain*), who introduced him to the school of perennialist writers. Northbourne translated René Guénon's *The Reign of Quantity and the Signs of the Times*, described by Huston Smith as one of the truly seminal books of the twentieth century, as well as Frithjof Schuon's *Light on Ancient Worlds* and Titus Burckhardt's *Sacred Art in East and West*. He was also an accomplished flower gardener and watercolorist, and a frequent contributor to the British periodical *Studies in Comparative Religion*, described by Schumacher as one of the two most important journals to read. Sophia Perennis is republishing all three of Northbourne's works, a fourth volume of uncollected essays spanning agriculture and metaphysics, as well as the 23-volume *Collected Writings of René Guénon*, including *The Reign of Quantity*. Lord Northbourne (1896-1982) was a man of exceptional vision, who already in the 1940s diagnosed in detail the sickness of modern society as stemming from the severance of its organic links with the wholeness of life. A leading figure in the early organic farming movement, his writings profoundly affected such other pioneers as Sir Albert Howard, Rolf Gardiner, Ehrenfried Pfeiffer, and H. J. Massingham. His path led him on to a profound study of comparative religion, traditional metaphysics, and the science of symbols, which he employed in incisive observations on the character of modern society. His later writings exercised considerable influence on his younger contemporaries E. F. Schumacher and Thomas Merton, and in many ways anticipate the essays of Wendell Berry. The republication of this milestone ecological text will be followed by three volumes of Northbourne's later metaphysical and cultural writings. A major text in the organic canon, too long out-of-print - Philip Conford, *The Origins of the Organic Movement* We have tried to conquer nature by force and by intellect. It now remains for us to try the way of love. - From the book (possibly for front cover, if not too long?)

The Soil and Health Albert Howard, 2020-03-22 This is a newly edited revision of Albert Howard's important text on organic farming and gardening, and the central role of humus in maintaining soil health and fertility. No single generation has the right to exhaust the soil from which humanity must draw its sustenance. Modern agricultural practices, with their

emphasis on chemicals, poisons, and toxins, lead to the impoverishment and death of the soil. THE SOIL AND HEALTH is a detailed analysis of the vital role of humus and compost in soil health — and the importance of soil health to the health of crops and the humans who eat them. The author is keenly aware of the dead end which awaits humanity if we insist on growing our food using artificial fertilisers and poisons. Albert Howard (1873-1947) was one of the leaders of the British organics movement in the mid-twentieth century. He was the first westerner to document and publish research on traditional techniques of agriculture, including Indian and Chinese farming and management of the soil. Agriculture is the fundamental industry of the world and must be allowed to occupy the primary position in the economies of all countries. — Albert Howard

Organic Agriculture, Environment and Food Security Nadia Scialabba, Caroline Hattam, 2002 Organic agriculture is defined as an environmentally and socially sensitive food supply system. This publication considers the contribution of organic agriculture to ecological health, international markets and local food security. It contains a number of case studies of the practical experiences of small farmers throughout the world (including India, Iran, Thailand, Uganda and Brazil) who have adopted fully integrated food systems, and analyses the prospects for a wider adoption of organic agriculture. The book also discusses the weakness of institutional support for nurturing existing knowledge and exchange in organic agriculture.

Agriculture Course Rudolf Steiner, 2013-04-02 Steiner's original contribution to human knowledge was based on his ability to conduct 'spiritual research', the investigation of metaphysical dimensions of existence. With his scientific and philosophical training, he brought a new systematic discipline to the field, allowing for conscious methods and comprehensive results. A natural seer from childhood, he cultivated his spiritual vision to a high degree, enabling him to speak with authority on previously veiled mysteries of life. Organic Futures Adrian Myers, 2005 Exploring the history, politics and practicalities of organic farming, Adrian Myers shows how the current techniques of agriculture and horticulture based on chemical fertilizers, which inevitably bring about the deterioration of soil life, cannot provide a long-term sustainable future for humankind.
