Pursuing Sustainability Pamela Matson, William C. Clark, Krister Andersson, 2016-03-29 An essential guide to sustainable development for students and practitioners Sustainability is a global imperative and a scientific challenge like no other. This concise guide provides students and practitioners with a strategic framework for linking knowledge with action in the pursuit of sustainable development, and serves as an invaluable companion to more narrowly focused courses dealing with sustainability in particular sectors such as energy, food, water, and housing, or in particular regions of the world. Written by leading experts, Pursuing Sustainability shows how more inclusive and interdisciplinary approaches and systems perspectives can help you achieve your sustainability objectives. It stresses the need for understanding how capital assets are linked to sustainability goals through the complex adaptive dynamics of social-environmental systems, how committed people can use governance processes to alter those dynamics, and how successful interventions can be shaped through collaborations among researchers and practitioners on the ground. The ideal textbook for undergraduate and graduate students and an invaluable resource for anyone working in this fast-growing field, Pursuing Sustainability also features case studies, a glossary, and suggestions for further reading. Provides a strategic framework for linking knowledge with action Draws on the latest cutting-edge science and practices Serves as the ideal companion text to more narrowly focused courses Utilizes interdisciplinary approaches and systems perspectives Illustrates concepts with a core set of case studies used throughout the book Written by world authorities on sustainability An online illustration package is available to professors

Sustainable Development: Asia-Pacific Perspectives Pak Sum Low, 2022-01-13 The Asia-Pacific region has been experiencing rapid development in the past 30 years, and issues relating to sustainable development will become increasingly important in the coming decades. This comprehensive overview presents sustainable development from the perspectives of Asia and the Pacific, with contributions from more than 70 leading international experts. The first part focuses on the theories and practices of sustainable development, including national and regional perspectives, as well as international policies and law concerning climate change. The second part highlights the challenges and opportunities of sustainable development and poverty reduction amid the changing ecological, social, cultural, economic, and political environment in this region. These include issues such as the importance of science for sustainable development and related areas, including sustainable energy, stratospheric ozone depletion, climate change, land-use change, biodiversity, and

disaster risk reduction. The volume is an invaluable reference for all researchers and policy makers with an interest in sustainable development.

Corporate Biodiversity Management for Sustainable Growth Ravi Sharma, Aparna Watve, Amitabh Pandey, 2020-05-11 This book aims to cover the multitude of corporate approaches towards mainstreaming biodiversity conservation and ecological management in policies and action plans, and explores the roles of these efforts in achieving national and global targets for the Sustainable Development Goals (SDGs). The book addresses various aspects of corporate actions such as corporate environmental responsibility, green businesses, market-based approaches to biodiversity conservation, and biodiversity trade-offs, and includes concept papers, reviews, and case studies presenting qualitative and quantitative research. Additionally, the text compares and assesses examples of positive and negative impacts of corporate involvement in biodiversity conservation in developed and developing countries to identify innovative approaches, and the best practices and models that can be replicated in diverse environmental conditions. The studies included in the book will help those working in the field of corporate involvement in biodiversity conservation, and outline the strengths and weaknesses of the approaches which will be useful for designing new environmental management action plans in the face of climate change. The book will also be of great value to researchers, academicians, policy makers, civil society groups, policy think tanks, and conservation managers.

Globalization and Papua New Guinea: Ancient Wilderness, Paradise, Introduced Terror and Hell Falk Huettmann, 2023-04-26 This book aims to present a reality view for Papua New Guinea based on many years of first-hand field work and research accounts. It further assesses sustainability in the light of 47,000 years of a self-sustained type of civilization without bad global impacts. This book contrasts the modern sustainable development failures from the colonial times onwards, as promoted by the 'western world', namely Australia, the UK, EU and the U.S as well as Japan and now, China, in times of globalization, Trump'ism and royal governance (Papua New Guinea is still part of the British Dominion and of the Antarctic Treaty etc). This assessment and book is the first of its kind also employing modern data analysis, Landscape Ecology principles (patterns and processes, telecoupling) and Geographic Information Systems (GIS) with Open Access data focusing on ecological economics, marxism, socialism and contrasting it with current capitalism and neoliberalism that Papua New Guinea is fully exposed to. Throughout the 31 book chapters various aspects are covered how a further insistence on the 'new' Sustainable Development Goals (SDGs) and so-called Development Aid will result in unwanted side effects and perverse outcomes for Papua New Guinea and for the world in times of wider 'global change' and unprecedented man-made crisis.

A Model Business Plan for a Sustainable Forestry Enterprise in Papua New Guinea Nikhil Sekhran, 1996

Alchemy in the Rain Forest Jerry K. Jacka, 2015-10-19 In *Alchemy in the Rain Forest* Jerry K. Jacka explores how the indigenous population of Papua New Guinea's highlands struggle to create meaningful lives in the midst of extreme social

conflict and environmental degradation. Drawing on theories of political ecology, place, and ontology and using ethnographic, environmental, and historical data, Jacka presents a multilayered examination of the impacts large-scale commercial gold mining in the region has had on ecology and social relations. Despite the deadly interclan violence and widespread pollution brought on by mining, the uneven distribution of its financial benefits has led many Porgerans to call for further development. This desire for increased mining, Jacka points out, counters popular portrayals of indigenous people as innate conservationists who defend the environment from international neoliberal development. Jacka's examination of the ways Porgerans search for common ground between capitalist and indigenous ways of knowing and being points to the complexity and interconnectedness of land, indigenous knowledge, and the global economy in Porgera and beyond.

Sustainable Communities, Sustainable Development Paul James, Yaso Nadarajah, Karen Haive, Victoria C.

Stead, 2012-07-31 Papua New Guinea is going through a crisis: A concentration on conventional approaches to development, including an unsustainable reliance on mining, forestry, and foreign aid, has contributed to the country's slow decline since independence in 1975. Sustainable Communities, Sustainable Development attempts to address problems and gaps in the literature on development and develop a new qualitative conception of community sustainability informed by substantial and innovative research in Papua New Guinea. In this context, sustainability is conceived in terms that include not just practices tied to economic development. It also informs questions of wellbeing and social integration, community-building, social support, and infrastructure renewal. In short, the concern with sustainability here entails undertaking an analysis of how communities are sustained through time, how they cohere and change, rather than being constrained within discourses and models of development. From another angle, this project presents an account of community sustainability detached from instrumental concerns with economic development. Contributors address questions such as: What are the stories and histories through which people respond to their nation's development? What is the everyday social environment of groups living in highly diverse areas (migrant settlements, urban villages, remote communities)? They seek to contribute to a creative and dynamic grass-roots response to the demands of everyday life and local-global pressures. While the overdeveloped world faces an intersecting crisis created by global climate change and financial instability, Papua New Guinea, with all its difficulties, still has the basis for responding to this manifold predicament. Its secret lies in what has been seen as its weakness: underdeveloped economies and communities, where people still maintain sustainable relations to each other and the natural world.

Ever Green: Saving Big Forests to Save the Planet John W. Reid, Thomas E. Lovejoy, 2022-03-29 Clear, provocative, and persuasive, Ever Green is an inspiring call to action to conserve Earth's irreplaceable wild woods, counteract climate change, and save the planet. Five stunningly large forests remain on Earth: the Taiga, extending from the Pacific Ocean across all of Russia and far-northern Europe; the North American boreal, ranging from Alaska's Bering seacoast to Canada's

Atlantic shore; the Amazon, covering almost the entirety of South America's bulge; the Congo, occupying parts of six nations in Africa's wet equatorial middle; and the island forest of New Guinea, twice the size of California. These megaforests are vital to preserving global biodiversity, thousands of cultures, and a stable climate, as economist John W. Reid and celebrated biologist Thomas E. Lovejoy argue convincingly in *Ever Green*. Megaforests serve an essential role in decarbonizing the atmosphere—the boreal alone holds 1.8 trillion metric tons of carbon in its deep soils and peat layers, 190 years' worth of global emissions at 2019 levels—and saving them is the most immediate and affordable large-scale solution to our planet's most formidable ongoing crisis. Reid and Lovejoy offer practical solutions to address the biggest challenges these forests face, from vastly expanding protected areas, to supporting Indigenous forest stewards, to planning smarter road networks. In gorgeous prose that evokes the majesty of these ancient forests along with the people and animals who inhabit them, Reid and Lovejoy take us on an exhilarating global journey.

Sustainable Design David Bergman, 2013-07-02 Written for students and practitioners in the fields of architecture and interior design, our new *Architecture Brief Sustainable Design* provides a concise overview of all the techniques available for reducing the energy footprint of structures and spaces. With clear, simple language and a practical can-do approach, author David Bergman covers everything from the profession's ethical responsibility, to design structures and spaces that sustain our natural resources, to specific considerations such as rainwater harvesting, graywater recycling, passive heating techniques, solar orientation, green roofs, wind energy, daylighting, indoor air quality, material evaluation and specification, and how to work with green building certification programs.

Designed for the Future Jared Green, 2015-04-21 In *Designed for the Future*, author Jared Green asks eighty of today's most innovative architects, urban planners, landscape architects, journalists, artists, and environmental leaders the same question: what gives you the hope that a sustainable future is possible? Their imaginative answers—covering everything from the cooling strategies employed at Cambodia's ancient temple city of Angkor Wat to the use of cutting-edge eco-friendly mushroom board as a replacement for Styrofoam—show the way to our future success on earth and begin a much-needed dialogue about what we can realistically accomplish in the decades ahead. Featuring an international roster of leading design thinkers including: • Biomimicry pioneer Janine Benyus • Curator Barry Bergdoll • Educator and author Alan Berger • Environmentalist and author Lester Brown • Architect Rick Cook • Urban Planner Paul Farmer • Critic Christopher Hume • Architect Bjarke Ingels • Landscape designer Mia Lehrer • Architect Rob Rogers • Critic Inga Saffron • Artist Janet Echelman

Timefulness Marcia Bjornerud, 2020-02-11 Explains why an awareness of Earth's temporal rhythms is critical to planetary survival and offers suggestions for how to create a more time-literate society.

From the Ground Up Peggy Tully, 2012-10-24 It is said that the history of modern architecture can be observed through the evolution of the single-family home. Over generations, each has hoped to improve on the last, rethinking and reinventing this seemingly simple building type. At certain historic moments in the discourse, new ideas about domesticity have given form to radically different configurations of home and community. Current emphasis on sustainability presents a unique opportunity to design affordable houses that respond to specific economic, social, and environmental challenges. In *From the Ground Up* editor Peggy Tully presents the results of an international competition to create new models for affordable high-

performance green homes in urban residential neighborhoods. Developed for a vacant infill site in Syracuse's Near Westside, these ambitious projects offer an array of innovative designs that provide a new vision for once-vital urban residential neighborhoods and well-designed energy-efficient homes throughout the United States.

Papua New Guinea Conservation Needs Assessment ,1993

Design Ecologies Lisa Tilder,Beth Blotstein,2012-03-20 Contemporary architects are under increasing pressure to offer a sustainable future. But with all the focus on green building there has been little investigation into the meaningful connections between architectural design, ecological systems, and environmentalism. A new generation of architects, landscape architects, designers, and engineers aims to recalibrate what humans do in the world according to how the world works as a biophysical system. Design in this sense is a larger concept having to do as much with politics and ethics as with aesthetics and technology. This recasting of the green movement for the twenty-first century transforms design into a positive agent balancing societal values with environmental needs. Design Ecologies is a ground-breaking collection of never-before-published essays and case studies by today's most innovative designers and critics. Their design strategies—social, material, and biological—run the gamut from the intuitive to the highly technological. One essay likens window-unit air conditioners in New York City to weeds in order to spearhead the development of potential design solutions. Latz + Partner's Landscape Park integrates vegetation and industry in an urban park built amongst the monumental ruins of a former steelworks in Duisburg Nord, Germany. The engineering firm Arup presents its thirty-three-square-mile masterplan for Dongtan Eco City, an energy-independent city that China hopes will house half a million people by 2050. An essay by designer Bruce Mau leads off a stellar list of emerging designers, including Jane Amidon, Blaine Brownell, David Gissen, Gross.Max, Robert Sumrell and Kazys Varnelis, Stephen Kieran and James Timberlake, R&Sie(n), Studio 804, and WORKac.

The Spirit of Green William D. Nordhaus,2021-05-18 From a Nobel Prize-winning pioneer in environmental economics, an innovative account of how and why “green thinking” could cure many of the world’s most serious problems—from global warming to pandemics Solving the world’s biggest problems—from climate catastrophe and pandemics to wildfires and corporate malfeasance—requires, more than anything else, coming up with new ways to manage the powerful interactions that surround us. For carbon emissions and other environmental damage, this means ensuring that those responsible pay their full costs rather than continuing to pass them along to others, including future generations. In *The Spirit of Green*, Nobel Prize-winning economist William Nordhaus describes a new way of green thinking that would help us overcome our biggest challenges without sacrificing economic prosperity, in large part by accounting for the spillover costs of economic collisions. In a discussion that ranges from the history of the environmental movement to the Green New Deal, Nordhaus explains how the spirit of green thinking provides a compelling and hopeful new perspective on modern life. At the heart of green thinking is a recognition that the globalized world is shaped not by isolated individuals but rather by innumerable

interactions inside and outside the economy. He shows how rethinking economic efficiency, sustainability, politics, profits, taxes, individual ethics, corporate social responsibility, finance, and more would improve the effectiveness and equity of our society. And he offers specific solutions—on how to price carbon, how to pursue low-carbon technologies, how to design an efficient tax system, and how to foster international cooperation through climate clubs. The result is a groundbreaking new vision of how we can have our environment and our economy too.

Big and Green David Gissen, 2002 More than a century after its inception, the skyscraper has finally come of age. Though it has long been lampooned as a venal and inhospitable guzzler of resources, a revolutionary new school of skyscraper design has refashioned the idiom with buildings that are sensitive to their environments, benevolent to their occupants, and economically viable to build and maintain. Designed by some of the best-known architects in the world, these towers are as daring aesthetically as they are innovative environmentally. **Big and Green** is the first book to examine the sustainable skyscraper, its history, the technologies that make it possible, and its role in the future of urban development. The book examines more than 40 of the most important recent sustainable skyscrapers—including Fox & Fowle's Reuters Buildings in New York, Norman Foster's Commerzbank in Frankfurt, and MVRDV's spectacular Dutch Pavilion from Expo 2000 in Hanover—with project descriptions, photographs, and detailed drawings. Interviews with such leaders in the field as Sir Richard Rogers, William McDonough, and Kenneth Yeang are also included.

Greenovate! Ronald S. Jonash, Hitendra Patel, Tyler McNally, 2010-03 This book is meant to stimulate awareness and discussion around topics of sustainability and innovation.--Page 113.
